                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 023                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 923                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 0001                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 00/02                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Fire Doors                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 36                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 98                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 60                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 50                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 51 Fig. 15. "Itemized Cost Estimate" Form Where Sub-Bids Are Called For

Digitized by Google

the basis of their determination or selection. The Outline of Work, Figs. 4, 5, and 6, and the "Itemized Quantity Estimate", Fig. 13, furnish the basis from which we proceed to study the concrete work for each particular job, somewhat along the following line:

(1) Cost of Materials: The cost of the aggregate will depend upon whether the concrete is to be made of natural mixture of gravel, stone, or sand in various proportions. The amount of cement depends upon the proportions of the concrete; this is also true of the amount of gravel, stone, and sand. The cost of water for proper manipulation should not be overlooked. In cities the cost of water is determined by standard rates. Outside of cities the cost depends upon the labor and equipment necessary to secure a sufficient supply.

(2) Cost Affected by Locality: Concreté work constructed at a remote distance from populous centers cannot be done at the same price as that which is in or near urban communities, unless the work is so remote that a permanent camp can be constructed and the laborers held by their very isolation. Work at some distance from the point of supply must bear a charge for transportation, for the handling and hauling of raw materials. This is a labor item chargeable to material inasmuch as the material should be considered as f. o. b. the job; nevertheless, the cost is increased per cubic yard in the proposal.

(3) Cost Affected by Character of Labor and Character of Work: Good American labor will accomplish more per day than foreign labor. American labor, however, is scarce and preferential. American labor differentiates between clean-cut concrete work under favorable conditions and concrete work under unfavorable conditions—adverse weather, excessive water, or other disadvantages. The same work may cost a great deal more when built under unpropitious and unsatisfactory conditions than when built in the city or town.

(4) Cost of Work as Affected by Forms: A wall of concrete 27 feet thick may be retained by the same forms and the same amount of form labor as is necessary for a wall 1 foot thick. In the latter case the form-labor cost per cubic yard of concrete is 27 times as great. It is, therefore, not safe to estimate the cost of forms on a basis of "guess" price per cubic yard of concrete. The timber work

in each individual job should be estimated as carefully as for any other item. It does not matter whether the cost is estimated on the basis of floor or of concrete surface, or upon a basis of feet, board measure, of lumber; the result is the same just so long as this important branch of concrete construction receives individual consideration.

(5) Cost of Work as Affected by Centers: There may be a misunderstanding as to the necessity of separating forms and centers. "Forms", properly speaking, consist of the timber work to form those members of concrete construction—columns, girders, etc. which must possess a certain regularity of shape and evenness of outline. "Centers", properly speaking, consist of timber supports for floor slabs, bridge centers, etc. Where the great amount of labor on timber work is expended solely for the purpose of supporting the mass at a uniform or definite height the unit cost is much less than where it is expended for forming for individual members.

Cost of Work as Affected by Reinforcement: Fabricated (6) reinforcement will cost much more delivered to the job than will loose bars; but, on the other hand, it will cost less to place in posi-It is to be expected that a job where the reinforcement is tion. made up of small bars of less than ³/₄ inch, will cost much more per ton for labor than where the sections are larger. Good judgment must prevail in this particular. It is very seldom that an estimate will be made based on the labor and the tonnage of each size of bar. It is the better way to strike an average labor price with reference to the proportion of different sizes of reinforcement to be encountered in the work. It is well to remember, in making the estimate. however, that it takes practically as long for the steel man to place and wire a  $\frac{3}{4}$  inch bar as a  $\frac{3}{4}$  inch bar, whereas the tonnage is only one-quarter as great.

(7) Cost of Work as Affected by General Charge Items: There are a great many items of the cost of concrete work which are not included in the cost of material, labor, forms and centers, reinforcement, etc. These costs consist of installation of machinery, and its removal, coal, oil, repairs and fittings to machinery, general charge items such as rope, bolts, etc., and the loss on petty tools such as shovels, etc. Such costs on the basis of so much per cubic yard, are to be determined from the percentage of labor on different classes of work.

78

Cost-Estimate Form for Sub-Bidders. Fig. 15 contemplates that when any portion of the work is to be sublet, the contractor will yet make his own estimate of the quantity of such work and the fair unit price. This method serves as a check on the sub-bidders and also provides a basis for determining the unit prices at which the various sub-bidders are estimating.

The first three columns are used for the contractor's own check estimate, while the balance of the sheet is for tabulation of sub-bids.

Relation of Cost Estimates to Previous Forms. Both forms, Figs. 14 and 15, should measure  $8\frac{1}{2} \times 14$  inches, as this size is just as convenient for filing and the extra length saves labor in forwarding totals.

The Outline of Work, Figs. 5 and 6, the Itemized Quantity Estimate, Fig. 13, and the two forms of Itemized Cost Estimate, Figs. 14 and 15, should be bound together in order, preferably on the side, in a loose-leaf binder. Each estimate as made should be placed in this binder in the order of the estimate number, and an index should be made. In a large office it is better to file the Outline of Work and Itemized Quantity Estimate in one binder in the estimating or engineering department, while the Itemized Cost Estimate is personally in the hands of the engineer, contractor, or of a strictly confidential employe.

Estimated Cost of Equipment. The amount to be added to the estimate for rental or depreciation of plant and equipment depends upon the "scheme of operation". It is suggested that in construction work, there should be added to the estimate the difference between the cost price of new equipment and its second hand sale value; good judgment must be used to determine this depreciation with regard to the character and probable wear and tear of each class. The depreciation, however, usually will vary from 40 to 60 per cent. In the case of equipment on hand, it is a matter of choice whether we add a rental in addition to profit or whether we consider the use of such a plant as included in the added profit and thus presumably gain an advantage over less fortunate competitors.

Maintenance of Equipment. The subject of "Maintenance of Equipment" is, however, a separate charge over and above any rental or depreciation and is a true cost to be charged to each job.

373

Various methods have been suggested, but for simplicity the writer advocates a Repair Account which forms a part of the General Charge. This subject will be treated in detail later when all of the proper charges to this account will be listed. Properly speaking, this is "Material-Cost Bookkeeping" and should be treated under Construction.

Rental or Depreciation of Equipment. Only in exceptional cases should rentals or depreciation be added as part of the unit cost of any item. If they are added to this cost, a fictitious idea is obtained of the estimated cost of the item, and moreover the total amount set aside for this cost can be obtained only by recalculation. This method is, besides, cumbersome and indefinite and will not stand investigation and analysis as will the percentage method of General Charge. The method of charging out the difference between the cost and second hand selling value in the case of new equipment is based on the theory that the repair account is charged to the job and that if the plant is properly looked after the machinery is always in good second hand condition and may be carried so on the inventories. If a rental is charged-or if equipment is leased to others-10 per cent per month, or a life of ten months on the first cost, is not unreasonable, except for rolling and heavy equipment. or on large contracts. This theory is based on the idea that the plant is a profit-making investment, and repairs and upkeep are worth the price.

Summary of Points in Making Estimate. In making the estimate, arrange the items in the logical order of sequence, as they would naturally occur in the actual construction. If the estimate is built up in this way there is little chance of overlooking items. A contractor who lacks imagination is certainly in the wrong line of work. The process of visualizing the proposition step by step will many times call attention to items which do not appear in the plans and specifications. We cannot anticipate all contingencies, but it is possible to build in the mind a model of the particular proposition.

Cost Data Subject to Wide Variation. Throughout the presentation of this cost-analysis system, the author has consistently refrained from stating any cost data based on actual experience, believing that such costs are of little value, except to the individual with whom they occur, and that they apply to his locality only.

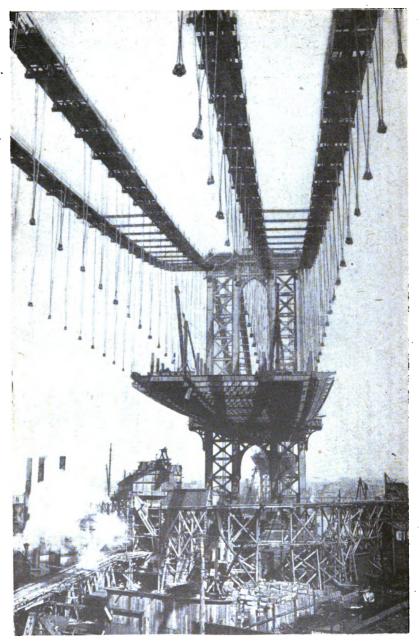

374

# COST-ANALYSIS ENGINEERING

The purpose has been to emphasize the methods whereby cach individual in any locality can analyze and develop his own system.

Material costs are readily obtainable. Labor costs are uncertain, depending as they do on character, class, nationality, and environment of men employed, and the circumstances and difficulties surrounding the work. We are writing for the man of experience who will accept suggestions as to methods, and for the young man who desires the groundwork upon which to build up an organization. The contractor knows his labor and what he can expect as a day's work. The young man should serve his time with an established organization, keeping his own notes and forming conclusions which, if supplemented by system and proper consideration for overhead and general-charge expenses, should enable him to start well prepared for prosperous experience. The young man can gain ideas of the efficiency of men by service as a timekeeper or subforeman, but will, in the majority of cases, miss many items of cost which do not appear in the field and which are confidential with his employer. It is to supply a lack of information on this subject that this paper will include actual results on costs other than material and labor.

# COST-ANALYSIS ENGINEERING

# PART II

# A COST-ANALYSIS SYSTEM (Continued)

# **GENERAL-CHARGE OR EXPENSE ITEMS**

Importance of General-Expense Items. The items which go to make up the General-Charge division of cost may be designated by various titles and may be proportioned to the estimate in different ways, but, regardless of their divisions in the schedule, their presence in connection with any work is as sure as the forces of nature. They are just as sure and certain a cost as material and labor and are really more destructive to profits, because of their insidious accumulation through gradual and apparently trivial daily expenditures. For our personal convenience we choose to 'apportion these items to labor, although this is proposed not as a rule but as a suggestion. They must be considered in the estimate, and yet, to a large extent, they cannot be determined except as the result of actual 'experience.

The author well remembers that when he first began estimating in construction work it was a matter of surprise and bewilderment to him why jobs, which in cost of material and labor fully realized the estimate, still proved a loss—or nearly so. It was a considerable time before it was recognized that the many small purchases were, in the end, the destroyers of profits, and that it was not safe to pass them by with the expectation that they would not be important enough to justify consideration in estimating. Some do not or cannot understand this but look on these items as contingent expenses unnecessary to include in the estimate. This is very far from the truth, for such expenses are as truly cost items as are material and labor.

Methods of Application. Some engineers and contractors advocate an allowance per unit of work, as per yard of excavation, concrete, etc., to take care of these charges. Others add an amount to the estimate, sufficient in their judgment to cover the total item.

.377

*Errors in Unit-Allowance Method.* The first method is altogether wrong for the following reasons:

(1) The addition of any such amount to a price per unit of work is deceptive in its after-effects.

(2) Such a method can never arrive at anything but a "guess".

(3) The estimator is yet unborn who can differentiate the cost per unit for general-charge items on several classes of work and secure an intelligent result.

Suppose we imagine an excavation for a pier foundation for a bridge requiring excavation, pile driving, and concrete. To do this work requires pumping, and a great deal of it if the pier is located out in the stream. Invoices accumulate at the office for coal and oil, and the actual coal and oil is delivered to the job and used as occasion demands. Excavating, pile driving, and concreting proceed practically simultaneously. Under these circumstances, how can we arrive at any fair cost per unit for fuel and oil? If the attempt is made to distribute the cost in any proportion to the various kinds of work it can only be done by arbitrary methods, which will not bear analysis.

Take another item—for example, Petty Tools. In this classification belong shovels. What contractor is wise enough or sufficiently in touch with his work to say what proportion of this cost should go to excavation and what to concrete?

Take the Fittings and Repairs account. Who can say with any certainty how much of the repairs to pumping machinery should be charged to excavation and how much to pile driving or to concrete?

The fact is that all these charges are directly dependent upon the kind of work under construction, and the various jobs will show a greater or less cost along this line in direct relation to the difficulties encountered.

Distribution by Percentage Method. Therefore it follows that the various kinds of work should be separated, according to each contractor's experience, into definite classifications, with respect to the difficulties surrounding construction; from these the percentages to be added to the estimated cost should be ascertained to take care of all the items of general charge. Such classifications have been prepared by the author for his own work, and it has

84

378

# COST-ANALYSIS ENGINEERING

85

been found really surprising how closely the percentages of cost of these items for work of similar character will compare, even for both small and large jobs.

Percentage on Labor Cost Only. The consideration of the method of application of such percentages is important. If the percentage is added to the complete estimated cost of material and labor the results will show wide variation, due to the differences in cost of material. If proportioned over material only, the result will vary still more. The only logical method is to distribute this cost by a percentage on the cost of labor only. This theory is based on the following facts:

(1) The labor for the same kinds of work is more nearly constant than the cost of material.

(2) The contractor must always furnish labor, whereas material may be entirely eliminated; it may be reduced in price by concessions as to transportation (as in railroad jobs with free haul); or, as in cases of work at some distance from railroad facilities, it may be greatly increased in price by delivery charges.

(3) The higher the grade of work the more the cost of labor and the more the cost per man-hour.

(4) The more difficult the work the greater the cost of labor and the less the output per man-hour.

(5) The higher the grade or the more difficult the work the less the output per dollar of expenditure for payroll.

Labor Cost, the Measure of Efficiency of Management. Granting the foregoing conditions, the cost of labor is the measure of efficiency of the work management. To secure results which are comparable and thus to obtain correct ideas of costs as a basis of efficiency, the general charges must be determined by a percentage on labor, this conclusion being always governed by a due consideration for the kind of work. The more thought given to this conclusion the more it will impress itself on the individual as a truth. Consider any type of construction with which you are familiar, and the method will gain in significance with each illustration considered.

Take a case of heavy wet excavation. The cost of labor is naturally more than for dry excavation, and so is the cost of all the items going to make up the general charges. For this class

of work the increase in general charges will show most in Fuel and Oil, Fittings and Repairs, and Expense. High-grade labor will not be employed on this class of work. But suppose we have stone masons building a piece of masonry which must be carefully cut and fitted. Fuel and Oil, and Fittings and Repairs are low in this case, but Expense will be large in proportion to payroll on account of dressing of tools, etc., and the output per dollar of labor is small. The two cases are not comparable and belong in separate classifications, but they are mentioned as illustrations of the principles involved.

This method has been applied to 125 jobs covering ten years of work and it has been found to give definite comparable results, whereas other methods make the estimates largely a matter of guess. In using the percentage method it is always wise to prepare a check estimate by a mental review of the job under consideration and deciding, in accordance with past experience, whether or not the amount determined by percentage seems reasonable.

Discussion of Divisions of General Charges. The schedule, or division suggested for General Charges, is as follows:

(1) Contract Bonds, Maintenance Bonds, etc.

(2) Liability Insurance—comprising Employers' Liability, Public Liability, and Workmen's Collective Insurance.

(3) General Expense—items as per list.

- (4) Petty Tools—as per list.
- (5) Fuel and Oil—as per list.
- (6) Fittings and Repairs—as per list.
- (7) Commissary—where necessary, as per list.
- (8) Interest.
- (9) Machinery and Equipment.

(10) General Office, and Supervision.

In establishing any such schedule as the foregoing, it will be recognized that, unless a general rule be adopted as to what shall be charged under each heading, the bookkeeper cannot, day by day, record the general charges in such a way that all jobs, past, present, and future, may be compared with reference to the same item. Inasmuch as bookkeepers change while the system must continue, it is well to preserve a decision once made by preparing a stand-

ard list of the ordinary purchases. Such a list will be shown for each of the headings given above.

In considering Bonds and Insurance, information and rates are given at considerable length. A man located in a large community may not find this data as valuable as the man who is not so closely in touch with a well-informed agent, but, for reference and comparison and for purposes of estimating, this information is indispensable. However, it is advised that wherever possible an agent of the bonding and insurance companies be called upon to verify the information. Incidentally it should be noted that liability insurance is computed on the payroll at various rates, according to the hazard of the occupation, and this change of rate substantiates our contention that all the items of general charge should be adjusted to the job. Since we have insisted that, in estimating, material and labor should be separated, there is no difficulty in the application of this method.

It will be found that for different kinds of work under various conditions, the proportion of cost of labor with respect to the cost of material will run pretty uniformly, and if a record is made of these percentages it will assist a great many times in approximate or preliminary estimates.

#### BONDS

**Classification.** The information herewith furnished, with reference to bonds, is in accordance with a manual of fidelity and surety bonds issued by a well-known bonding company for past work. Contract bonds are classified as (a) construction; (b) supply; and (c) maintenance.

**Construction and Supply Bonds.** Construction contracts are those in connection with work which forms a part of, or becomes attached to, real property when the contract in question is completed. When the contract for the repair or erection of any work classified as construction includes, within the same contract bond, the furnishing of any building material, the entire contract is rated as a construction bond. When the contract is solely for the furnishing of building material and does not include any installation, the contract may be classified as a supply bond.

Premiums. Construction Bonds. The premium applicable to construction bonds for usual kinds of contract work is based on

381

a rate of one-half of one per cent per annum on the contract price. Note that this rate is figured on the contract price and not on the amount of the bond; also note that the premium is per annum, so that, should the work extend over more than one year, allowance must be made for renewal of the same premium. It should also be understood that the premiums are due from the date of the bond, whether actual work begins immediately or not.

Supply Contracts. Premiums for supply contracts may be figured at the rate of one-fourth of one per cent per annum on the contract price, and include the furnishing of supplies, material and machinery of stock design. Machinery, etc., made to special order requires a premium of one-half of one per cent, the same as a construction contract. Any labor connected with the installation of supply contracts must be figured at the construction-contract rates.

Proposal Bonds. Many times it is necessary to furnish a *bid or proposal bond*. The usual rate for a bond of this character is \$5.00 each, and this premium is considered fully earned whether the proposal is successful or not. Should the proposal be successful the premium for this bid bond may be applied as a part payment on the premium for the contract bond, provided the bond is taken from the same company.

Construction Contracts. The minimum premiums on construction-contract bonds are as follows: (1) where the bond does not exceed \$500 and the contract does not exceed \$1000, bonds \$5 each; and (2) where the bond is over \$500 or the contract is over \$1000, bonds \$10 each. It will be noted that these minimums require that a contract shall equal \$2000 or more before the regular rate of one-half of one per cent would equal the minimum premium.

Maintenance Bonds. Maintenance bonds are of two kinds: viz., those covering the guaranty of the entire construction work; and those covering the guaranty of only a part of the construction work. In the first case the premium rate for maintenance bonds is \$1.25 per thousand per annum computed on the contract price, and in the second case \$1.25 per thousand per annum computed on the value of the guaranteed work. The premium for the maintenance bond for the entire term of the guaranty is due in advance at the time the construction bond is issued.

382

# COST-ANALYSIS ENGINEERING

Establishing Credit with Bonding Company. It is just as important to the contractor to have a credit line with some wellestablished bond company as to have a credit with his bank. The standing of any contractor with the bonding company depends on two conditions: financial standing, and moral hazard. Within reasonable limits a bonding company will extend greater favor to the good moral hazard than to the contractor of better financial standing but with a poor record for fulfilling his obligations.

Many states and municipalities, and also the United States government, have special requirements regarding bonds, and it is always well to consult an agent to be sure that the standard rates

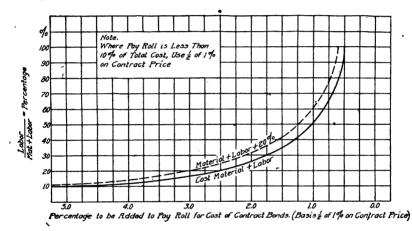

Fig. 16. Curve Showing Percentage to be Added to Payroll to Cover Cost of Contract Bonds

apply on any new work. The foregoing rates are standard for ordinary work, old manual.

Method of Calculating Bond Cost. Inasmuch as the premium on bonds, regardless of the amount of the bond, is computed on the total amount of the contract—which includes material, labor, general-charge items, and profit—we must either compute the bond cost separately from other items of general charge or increase the rates in proportion to the percentage which the payroll bears to the cost of material and labor. The more accurate method is to complete the estimate, except for the bond, and then to add the cost of the bond plus the same percentage of profit as is used for the general estimate.

**8**9

383

For all practical purposes, however, sufficiently accurate results are obtained by including the bond cost along with other items of general charge. As our system requires that material and labor be separated in the estimate, we are able to arrive at once at the percentage the payroll bears to material and labor. By referring then to chart, Fig. 16, the proper per cent to be included in the general charge and added to the payroll may be ascertained.

For instance, if the labor represents 50 per cent of the cost of material and labor, the percentage to be included in the general charge and added to the payroll is 1 per cent. If the labor represents 20 per cent, or one-fifth of the cost of material and labor. the percentage to be included in the general charge and added to the payroll is  $2\frac{1}{2}$  per cent. Naturally, if the contract is all labor and therefore all payroll, representing 100 per cent of the cost, the rate will be one-half of one per cent. At 10 per cent labor the per cent to be added to the payroll increases to 5 per cent: but a contract with such a small amount of labor is unusual, and it is recommended that jobs of this character with 10 per cent or less labor be calculated by the method first suggested. When we have a job with 10 per cent or less labor we are verging on a supply contract, and it is probable that the cost of the bond can be decreased by a proper division of the work under the headings of construction and supply.

# LIABILITY INSURANCE

Features of Liability Insurance. Liability insurance is not accident insurance, as some employes seem to understand. Contractors' liability insurance (briefly known as E. L. policies) is essentially insurance against the contractor's liability for damages because of accidents to any of his employes. It is, in fact, a contract between the contractor and the liability company whereby, in consideration of a certain fee to be paid by the contractor, the liability company agrees to furnish the first or emergency medical aid and to save the contractor from any and all claims for damages up to the limits of the policy. The usual limits of the policy are \$5,000 and \$10,000, meaning thereby \$5,000 for any one individual judgment or \$10,000 for any one accident—the latter being the limit for an accident when a number are insured and where the

**90** 

aggregate amount of judgments does not exceed the amount named. Almost any limits will be accepted by the liability-insurance companies but the ones given are usual. Any increase of the limits is naturally accompanied by an increase in the rate of premium.

The contractor should consider that his rating or credit with his liability-insurance company is almost as important as his credit with his bank or bonding company. Both the bank and the bonding company gage the contractor by his financial standing and by his general reputation for fulfilling and satisfying his obligations. The liability-insurance company judges the risk_f in light of its past experience on similar work, but tempers its decision by the standing of the contractor and what is known of his experience, methods, and disposition to assist the company to secure reports, records, and settlements. A contractor, by establishing a good reputation may gain the advantage of a close rate, while one with a poor record may even be refused by one company after another. The interests of the contractor and the liability company are identical and there should be close co-operation.

Liability Premiums. The minimum premium for liability insurance is \$50, and the only way to avoid an increase in cost on this account, when many small contracts are handled, is to secure a general, annual, or blanket policy covering all work of any character. Naturally on large work this feature is of no consequence.

Public-Liability Insurance. The possibility of accidents to the public and to the employes of others must be considered, especially when the work is located in a city or town where others are working on the same contract. To provide for this contingency public liability insurance (P. L. policies) is furnished at a somewhat less rate than is employe insurance.

Workmen's Collective Insurance. Workmen's collective insurance is now required in some states and is a feature of the insurance cost which will require more consideration in the future. Briefly, this class of insurance may be considered as accident insurance. The rates vary with the class of work. The benefits are:

(1) In the event of death within 90 days, a sum equal to, but not exceeding 1 year's wages, sometimes limited to \$1500.

(2) For the loss of two limbs or two eyes a sum equal to the amount payable under the policy at death.

385

(3) For the loss of one limb, a sum equal to one-third the amount payable under the policy at death.

(4) For the loss of one eye a sum equal to one-eighth the amount payable under the policy at death.

(5) In the event of temporary total disability, a sum equal to, but not exceeding, one-half the weekly wages for a period not exceeding 26 weeks, such sum not to exceed \$750 in respect of any one person injured during the policy year.

These benefits are for accidents occurring only during working hours, but by an additional charge of 15 per cent the policy may be written to cover the whole 24 hours.

Discussion of Rates of Insurance. The brief abstract of standard rates, Table I, gives a general idea of the cost of employers'liability, public-liability, and workmen's collective insurance. This table is not intended to cover the entire field of contracting work, and has been prepared from a manual of recent but not current date. The examples are given to serve only as a guide in general construction work.

The rates in the table do not include the hazard due to blasting, unless specifically mentioned. The rates given are for Illinois, Iowa, Missouri, and Nebraska, and for all other states by use of the proper differentials.

How Cost of Liability Insurance is Borne. Many states, by legislative enactment, have very materially increased the cost of liability insurance. The intention has been to protect the interests of the workman, but it must be remembered that the public pays the bill in the increased cost of all building operations. The workman is indeed deserving of a certain protection in his work, and the economic interest of the community at large justifies a . recompense to him or his family for injuries or loss of life, but this result cannot be obtained without a corresponding increase in cost of every building project.

In other words, every contract carries, in addition to the cost of material, labor, and supplies, the possible cost of human effort expressed in loss of time and suffering due to injury and death. This cost is just as true a one as are the others, is more far-reaching, and should receive its proper recognition; but only by legislative action can this cost be distributed over the entire community and

92

386

be included in all proposals—a very essential factor in estimates and proposals.

The only regret is that such laws are abused by malicious and scheming employes, abetted and assisted by attorneys, to the end that the very purposes of the legislation are defeated and the matter of claims made the subject of distrust and antagonism. Any prudent or responsible employer of labor cannot afford to be without the protection of liability insurance, for to carry his own risk invites litigation and loss. A minor may have an accident today but can defer suit for years; therefore liability insurance should be carried in a well-established company of financial strength. Fire losses cannot exceed the value of your property, but liability for personal injuries cannot be estimated.

#### TABLE I

#### Abstract of Standard Liability-Insurance Rates

These rates should not be used for estimate purposes. Secure current rates from a liability company.

Fire Insurance. Fire insurance is not of great importance to cost analysis in construction work, but, as it is often required, it is well to know that the rate is one-fourth to one-half of one per cent per annum short rate—that is, this rate will be proportioned to the actual time of construction. Many times arrangements can be made to join with the owner in a regular standard 3-year term policy whereby the insurance during construction may be carried at much less expense.

# **GENERAL-EXPENSE ITEMS**

Classification of General-Expense Items. General-expense items are many and various. Into this classification are thrown all of the items whose cause and nature are at all times uncertain. General-expense items consist properly of accessory materials; repair items of small character, such as petty tools; and supply features of any contract. The main items are indicated in Table II.

^{*}The items here given may be considered as contributing materials, inasmuch as they do not form a part of the completed measured quantity unit.

# TABLE III

# Amount of General-Expense Items on Twenty-One Actual Jobs

Dredging Dredging Sewer (special)	97 92 90	2.8 2.1 1.7

How General-Expense Items Operate on Particular Jobs. General-expense items really have no salvage value and are a direct charge against each job. Their aggregate cost is of no small consequence, as is shown by Table III, which gives the results of twentyone jobs. The first item was on a job where the payroll represented approximately 50 per cent of the cost. Therefore this general-expense cost represented 8.65 per cent of the entire cost of material and labor. To show how important these items can be, it only suffices to say that sometimes a contractor would be satisfied with such an amount as a profit.

This table is naturally of much more value to the author than to any reader, because the index number furnishes the key to open up a mental picture of each job and its peculiar features. Such a table of rates cannot be absolute, but requires experience and judgment in its use. It is, however, not different in that respect from the liability company's schedule of rates, Table I, where slight differences in the kind of work or the conditions under which it is

Buildings	18	1.8
General average for	40 job	s = 2.14

done make changes in the rates. The percentage given should not be used for estimating purposes.

#### PETTY TOOLS

Method of Applying Charges for Petty Tools. Nothing with which the contractor must contend is more exasperating than the loss, breakage, stealing, and carelessness in handling of small and petty tools, a list of which is shown in Table IV. This expense cannot be considered as applying strictly to any one job; it is better regarded as a general loss determined by several years' experience.

Table V shows how this cost fluctuates as a percentage of the payroll. It seems advisable, however, to use the average, since jobs overlap; one job may profit by stock on hand, and another may lose on account of new purchases. The term, however, is an absolute general-charge cost and should not be overlooked. The method of percentage of payroll is especially applicable, as the labor employed uses the tools and is directly a measure of the amount necessary.

There is a salvage in Petty Tools which should be taken care of by debiting the Yard account, and this latter account in turn should be credited when the tools are sent out on a new job. It is for this reason that the general average loss is recommended for use as a general charge, although each job should have placed to its account the full amount expended for this item. The salvage is low grade and of but slight cash value.

393

### TABLE VL

# Fuel and Oil Items*

# FUEL AND OIL

Fuel and Oil Charges Depend on the Job. Fuel and Oil is a direct charge to the work, and whether the amount is large or small depends on the kind of work and the difficulties encountered. Fuel and Oil will be much more of an item for a concrete-bridge pier, requiring pumps, derricks, hoisting engines, pile drivers, mixers, etc., than for a concrete pavement—although the concrete itself may be of approximately the same cost for materials, but not for labor. Therefore, as in other items of general charge, the fact is brought out that the payroll is the best indication of the work, and Fuel and Oil should be apportioned by a percentage thereof.

The items going to make up this division are indicated in Table VI, and the costs by percentages on a number of jobs are given in Table VII.

### TABLE VII

#### Fuel and Oil Cost

Compiled by Method of Percentage of Payroll

CLASS OF WORK	NUMBER OF JOBS	PER CENT OF PAYBOLL
- Bridges	7	7.0

Number of Jobs	PER CENT OF PAYROLL
7 2	1.70 .70
6	4.40
$\frac{2}{2}$	4.20 1.30
4	1.50
	ог Јова 7 2 6 2

^{*}Use for distribution of invoices or labor cost, charging to contract upon which equipment is being used. It might seem proper to make this a general charge over all jobs but experience shows that supplies of this class are lost, stolen, or damaged every time a move is made and, therefore, the job should stand the loss and consequent charge.

nected with the particular job and those items which pertain to the general up-keep of machinery. The items ordinarily encountered are shown in Table VIII, and their application to the particular job by the percentage method is shown in Table IX.

# **COMMISSARY EXPENSE**

Items Covered by Commissary Expense. Many times it is necessary to maintain a commissary for the proper care of men. This may be an established camp of shacks or huts, or it may be a train of wagons or cars moving from job to job. The latter sort is suitable for jobs along a railway line. The items to be charged to this account will appear many times in jobs where a job commissary is not existent. For this reason and because of the particular character of the items it would seem desirable to maintain a commissary charge on all work. The items are shown in Table X and the percentage charge to the payroll is given in Table XI.

## TABLE X

## **Commissary Expense Items**

Desks Bedding Boots Buildings Bunk cars Boarding cars Camps* Candles Canvas Cooking utensils Cots, etc. Covers Food	Fuel Ice Knives and forks Lighting Pots Rents Store supplies Stoves Table furnishings Tarpaulins Transportation Tents, etc., etc.
---------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------

# TABLE XI

### **Commissary Cost**

Compiled by Method of Percentage of Payroll

Type of Camp	Average Per Cent of Payroll
Permanent Camps	3.5
Moveable Camps	7.0

* Where men must be cared for in camps there is, many times, an extra cost to the work due to installation of camp and losses in operation.

# INTEREST

Method of Handling Interest Charges. Assume a contract of \$100,000 to be completed in 10 months, that is, at the average rate of \$10,000 per month. Payments are to be made during the progress of the work to the extent of 85 per cent, payable the 15th of the month following that within which work is done, final payment to be made 60 days after completion. Assume also that profit is at the rate of 10 per cent on cost.

In the first place, at the rate of \$10,000 of work per month the actual average cost is approximately \$9000; the contractor receives \$8500, and \$1500 per month remains in the hands of the client. Then since one-half month's work on the current month elapses before payment is made for the preceding month, \$4500 is expended for cost of work. Since his payroll comes weekly and his average time for bills due is 30 days, the contractor, under these conditions, even if he can buy material on 60 days, is always in arrears and must pay interest on the amount held up in excess of profit and for work done and not yet payable. This charge will amount to a percentage on the total cost, depending on the contractor's credit in the purchase of materials.

The maximum cost in interest is reached where no work is paid for until the whole is completed and accepted. In such a case full interest plus a bonus or fee should be added to the estimate, as no capitalist can afford to speculate on financing work of this kind without receiving at least double the ordinary legal interest for money.

The time necessary to complete work or during which payment is withheld will naturally affect the charge.

# MACHINERY AND EQUIPMENT

**Division of Construction-Equipment Item.** Machinery and equipment can be considered as either an investment or an expense item. In the first case a reasonable interest or rental return should be expected, which may be included in profit. In the second case a rental or depreciation should be charged directly to the job.

Since the Fittings and Repairs account, Tables VIII and IX, is supposed to take care of the wear and tear due directly to the particular job, general depreciation is to be considered under the present heading. If machinery is purchased for any job, one-third

# TABLE XII

feature but in general it serves principally as a check upon the quoted prices for materials or equipment. A list of the elements to be considered is given in Table XIII.

#### **GENERAL OFFICE AND SUPERVISION**

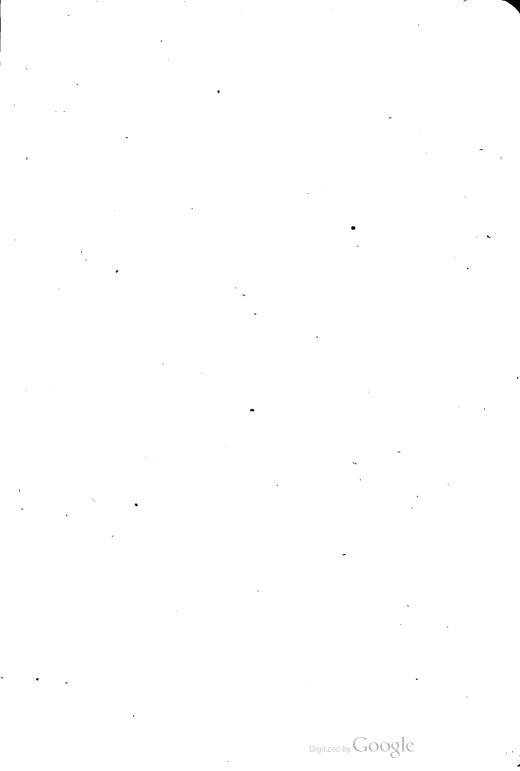

This general-charge cost not only varies with the character of work, but also with the volume of work and the magnitude of the organization. The cost exists even if a contractor has "no office but his hat", for he must have some expense. This charge is constant, work or no work, and the amount to be allowed is a matter of individual judgment.

Analysis of Time Sheet. In beginning the consideration of the construction period, reference must be made at once to the Item-

ized Cost Estimate and a condensed list made of those main divisions of work which should be carried separately on the regular time-sheet report.

istribution Items, Expense, and Material Report

The time sheet prepared is a form which is the development of many years' experience and which is so arranged that it may be used for any sort of work, and carried either as weekly or daily reports to the office or to the contractor, Figs. 17, 18, and 19.

Instructions for the use of the time sheet appear on the righthand side of the reverse of the sheet, Fig. 19, but, for the sake of clearness they are given as follows:

#### INSTRUCTIONS FOR USE OF TIME SHEETS

#### (For Use in Cost-Analysis Timekeeping)

It is intended that this sheet shall be used for all jobs, whether timekeeper makes report to payroll clerk daily, weekly, or monthly, and it is to be used also for making summary reports. In using the time-sheet side, always place date at head of column and when making out summary sheet, place daily dates in the name column. In using the distribution side, the column marked "Timekeeper's Check Column" must have dates placed at the head corresponding to the time-sheet side, and each column represents one day (see Fig. 18), the distribution being taken four times per day and marked inside of the four little squares, using distribution letter. However, for daily sheets (see Fig. 17), each vertical column represents one hour, and separation of times must be checked to the hour. Distribution columns will be headed by rubber stamp for each job, and each man's time must be distributed under the proper columns and the totals reduced to dollars and shown at the foot of the sheet; except that for summary sheets, totals will show opposite each day. Timekeepers must keep careful record of cars received, expense, and cement and fill out to form (see Fig. 19). Timekeepers and engineers will co-operate to insure that summary sheets are correct as to time distribution and amount of work done. Daily time sheets must be turned in to the office at the close of each day, weekly time sheets each Thursday evening, and bi-monthly or monthly sheets will be separated and turned in at least once each week. No change of rate of pay will be allowed between payroll periods.

No deviation from these instructions will be allowed on any job.

It will be noted that the distribution columns are headed by letters. No two jobs may have the same letter for the same kind of work, but for the particular job each letter stands for a classification of work, and the cost-distribution book is similarly headed so that there may be no error.

The time sheet actually used was  $8\frac{1}{4}$  inches high by 10 inches wide, and 25 names and 13 distributions were provided for. The sheet can be made  $8\frac{1}{2}$  inches by 11 inches, the regular commercial correspondence letter size, and standard letter files used, the time sheets being filed unfolded. When used, the time sheet should be placed in a cover as shown in Fig. 19, which holds the sheet by the

401

corners in the same manner as an ordinary desk pad, and folds on the vertical center line. The covers, as shown, can be placed in the side pocket of the coat, being  $5\frac{1}{2}$  inches by  $8\frac{1}{2}$  inches. Fig. 17 shows the front or timekeeping side of the time sheet arranged for daily reports. Fig. 18 shows the same form of time sheet arranged for weekly reports. The top and bottom only of these sheets are shown; the number of lines between can be estimated from Fig. 19.

In Fig. 19 showing the reverse side of the time sheet, special notice is called to the right-hand side where a continuous record is obtained of the job from its beginning to its completion.

Checking the Men. In beginning a job under this system, all the men are given numbers, commencing with the superintendent as No. 1, and identification cards are issued. These cards are retained until the end of the payroll period, generally one week, and surrendered in exchange for the payroll envelope containing wages. Each week new cards of different color should be issued in such rotation that one color will not be used again for at least a month. This scheme avoids the disadvantages of the brass-check system while fulfilling the same purpose. The cards can be expected to remain in good condition for a reasonable period, they serve the purpose of absolute identification, and are receipts beyond question when in the hands of the paymaster.

By using the different colors, there can be no duplication or errors due to the numbers assigned to the men. For instance, No. 72 for the week yellow cards are used may not be the same man as No. 72 the next week when blue cards are issued. This arrangement also makes it possible for the men older in period of employment to be moved forward from time to time, so that the higher numbers will be indicative of new untried men; this groups the steady employes in the tabulation on the payroll. The colors to be used are red, blue, yellow, and green. The men generally wear the cards in their hat bands. The simplification of work to the timekeeper and paymaster is beyond computation.

*Payrolls.* The time sheets are filled out from day to day and handed to the paymaster, who prepares the payroll. A payroll should be prepared day by day. One hour's work per day will mean seven hours or a whole day by the end of the week, but procrastination may result in failure to complete the payroll on

112

113

time, or at least may increase the chance for many careless and unnecessary errors.

The payroll envelopes are then prepared, using the payroll as a basis and these envelopes are made in colors the same as the identification cards; a man who calls for his money several days or weeks after pay day cannot then be confused with any other man of possibly the same number or name working during a different payroll period. During the interval of payroll periods it is necessary to discharge many men, and this proceeding is brought into harmony with the general system by the use of "discharge blanks".

Tracing Employes through Timekeeping System. Let us trace regular and floating employes through their introduction to this system, using both daily and weekly reports.

We will suppose we have two jobs under construction, one on a basis of daily reports and one of weekly. In both cases all men employed have been assigned numbers and cards. The hours, rate, and amount are not filled out on cards unless it is particularly desired to obtain a definite receipt. The time sheets, Figs. 17 and 18, show the men and the time made by them and the character of work upon which they were placed.

Note by Fig. 17 that James Brown, No. 8, worked 10 hoursfrom 7 a.m. until 12 m., and from 12:30 until 5:30 p.m.—of which 5 were on excavation, distribution letter A, and 5 on concrete, distribution letter C. Peter Carter, No. 9, came on at 11 a.m., and worked one hour until 12 m. on concrete (C), then began again at 12:30 p.m., worked until 5:30, making 6 hours in all. It will be seen that the time spacing at the head of the timekeeper's column means one hour for each division, the upper half denoting the hour and the lower half the half-hour. It is not necessary to mark the distribution letter in each column as it is understood that the man continues on the same work, until by a distribution-letter change at the closest hour or half-hour he is placed on other work.

Assuming at the same time that we have job No. 21 running on a basis of weekly reports, we see Richard Roe, No. 72, Fig. 18, worked Monday to Wednesday, being discharged on the latter day after having made 23 hours as distributed under A, B, and C. His time for Monday and Tuesday having been turned in to the paymaster (possibly the contractor himself), the timekeeper made

out his discharge check for the three hours on Wednesday, and the paymaster added the amount for Monday and Tuesday and paid him \$4.60 upon surrender of his card, properly signed. Upon the payroll, the paymaster then writes in the extreme right-hand column "Paid by discharge, No. 72". John Doe, No. 73, on the other hand, having completed a full week's work, is paid, upon surrender of his card, by a payroll envelope of the same name, number, and color, with all proper deductions made.

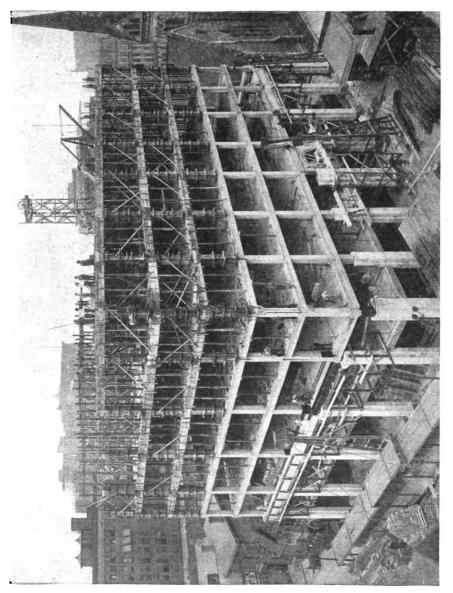

Ordinarily, it is assumed that large and important work requires daily reports while small work, or jobs where there is little shifting of men, can be reported weekly. In the first case, changes in the distribution may be made to the closest half-hour. In the latter case, changes four times a day would seem sufficient.

This system is flexible and can be applied to any organization, large or small. The cost of installation is not great, and the costanalysis results more than justify the expense. The rubber stamp used for distribution of time is made so the same stamp can be used on the reverse side of the time sheet, Fig. 19, where the opportunity is given to carry out the total quantities, total payroll, and unit cost for each period, for the previous periods, and for the total to date.

#### **OPERATION OF LABOR-COST DISTRIBUTION SYSTEM**

The methods outlined cover briefly the field end of the construction department and its connection with the office, in order to secure cost analysis as to labor distribution. To make the analysis more clear, a view of a reinforced-concrete office building during the construction is given in Fig. 20, and should be studied carefully in order that the proper idea may be had of the many problems presented to the cost-analysis engineer.

Forms and Centers. The view shows seven completed floors of a 12-story office building. The three lower floors have been entirely completed and all the forms and centers removed. The fourth floor is completed but it has been necessary to retain struts under the center of the beams in order to protect them from possible overloading while green. It should be noted that the placing of struts is done after the forms and centers have been removed, and is, therefore, an additional labor charge to Forms and Centers.

115

116

On the fifth floor the forms and centers still remain, but a part of the supports for centers have been removed in anticipation of the removal of all timber work. On the sixth floor level the timber work is all in place and braced so as to be prepared for the construction of the seventh floor. On the seventh floor forms and centers are completed and concrete work is in progress on the front portion of the building.

In the rear, where the centering work is of extra height, there is to be an assembly hall two stories in height, and for this reason we have a special feature of construction which must be taken into consideration in the final cost analysis.

Checking Labor on Different Classes of Work. The limestone facing of the two lower stories of the building is in progress, and so the timekeeper, in checking up the labor that is employed, must check up the labor of stone masons on the first and second floors; the electric-light workmen and plumbers on the second and third floors; the carpenters removing the forms and centers on the fourth and fifth floors; the carpenters on the seventh and eighth floors; and the concrete workmen in the basement where material is delivered, and on the eighth floor where the concreting is in progress. In connection with this checking of labor he must check invoices and wagon receipts for delivery of reinforcing steel, lumber, tile, cement, and other materials, which may be seen in the material yard in front of the building.

Derrick and Small Hoist. The erection of the small stiff-leg derrick might be considered as a charge against forms and centers inasmuch as it is used principally for the hoisting of timber removed from the floors below. However, since this derrick is used for hoisting reinforcing steel also, the cost of erection and operation of the derrick must be proportioned. In this particular case an electric motor was installed for the operation of the concrete mixer and hoist. On account of mechanical difficulties the motor was abandoned after the fifth-floor level and a contractor's standard doubledrum steam hoisting engine was introduced, which may be seen in the right foreground. This engine was used to operate both the concrete hoist and the derrick. Since the concrete hoist was used to raise not only concrete but also tile, brick, and other materials entering into the construction of the building, the cost of these two

406

installations and their operation must be apportioned against the various classes of work.

Daily Time Sheet. The labor on this building was checked four times a day as to distribution, with the use of the form of time sheet shown in Fig. 18. As the common labor was very largely of foreign character, each man was carried by number—having a numbered card as previously described which was checked at the office in the morning, and brass checks hung on a hook-board with corresponding numbers.

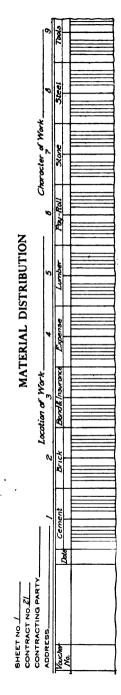

Instructions to Timekeepers. In this case as well as in the case of other complicated structures, the engineer in charge of the cost analysis should issue very definite instructions to the timekeepers and clerks on the job so that proper distributions may be obtained. For example, the ordinary timekeeper cannot be expected to distinguish between that part of the carpenters' work which is designated as Forms and that part designated as Centers, unless the costanalysis engineer furnishes a detail description of what constitutes each on the particular piece of work under construction. As a further illustration, it will be noted that the concrete on the first two floors, which is very nearly masked by the cut-stone work, has been given a coat of asphalt paint in order that the concrete may not in the course of time stain the stone work. The timekeeper should know whether this painting is a charge against concrete or a charge against stone work. The writer would charge this painting to stone work but others might decide otherwise. If so charged it is an indirect material-and-labor charge against stone work. However charged, the same system should be followed throughout and notations made so that proper comparisons may be drawn with other jobs of like character.

#### **Cost-Analysis Bookkeeping**

The independent work of the office contemplates the completion of the records just discussed by the bookkeeping system described as follows:

Ledger Entry System. In the first place, we must have the common double-entry ledger system, such as is used in any ordinary mercantile business. In this ledger are carried the personal accounts of all individuals with whom the concern may be dealing. The

407

Typical Material-Distribution Sheet

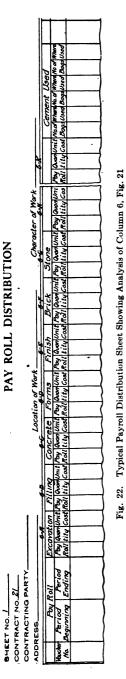

Fig. 21.

118

larger accounts are carried under the firm name, while individual and miscellaneous accounts may be carried under "Miscellaneous Accounts Payable" or "Receivable". In making the ledger entries a vacant line is left opposite the respective debit and credit entries, so that when the account is adjusted an entry will show on both sides of the page. In other words, a vacant line on either side of the page is an indication that the account has not been closed.

Material-Distribution Sheet. Passing this subject of the ledger bookkeeping, which is a more or less purely commercial transaction, let us consider the particular bookkeeping which is applicable to Cost-Analysis Engineering. In Fig. 21 is shown a form for all charges growing out of the operation of the construction organization, the gross amount of which must check with the ledger. This distribution sheet, headed "Material Distribution", serves as an index to all expenditures and all other expenditure records in the office. In other words, while serving as an index or voucher record it gives the distribution of expenditures in such a manner that we may know where and to what account expenditures have been made. In the extreme right-hand column of the sheet-not shown in the figure -the total amounts of expenditures should be recorded, item by item as payments are made, while their distribution may be confined to one column or divided among sev-The headings of the distribution coleral. umns are written in so as to be adjustable to each contract according to the character of work; particular attention is called to

Digitized by Google

the fact that the columns are arranged for credit and debit entries so that each account or each distribution is complete in its final result.

119

In case there are more distributions than can be carried on one side of the sheet, the end of the sheet can be cut off and the distributions continued on the reverse side, or on several pages.

At the head of each column appears a numeral indicating the account number for the particular job, the headings of the columns being written in for each job.

Payroll Distribution Sheet. Supplementary to this general distribution sheet appears the "Payroll Distribution" in detail, Fig. 22, which is in the same form as to distribution items as the Time sheet, Figs. 17, 18, and 19.

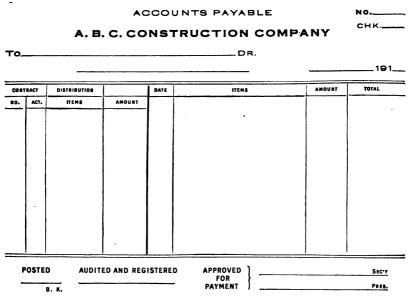

Particular attention is called to the fact that the gross amount of payroll appears on the Material-Distribution sheet, Fig. 21, which properly may be designated as a general distribution. (On this particular distribution sheet the payroll account appears in Column No. 6.) On the detailed Payroll-Distribution sheet, Fig. 22, appears this same account number with sub-letters heading each column and agreeing with the letters heading the columns on the Time sheet, Figs. 17 and 18, and on the reverse side, Fig. 19. Under this system, while no two jobs may have the same account numbers or letters for the same item, still, if for any reason reference is made to any one particular job, the nature of the account is indicated by the numeral and, in the case of the payroll, this suffix of a letter indicates

Digitized by Google

COST-ANALYSIS ENGINEERING

a particular classification so that there can be no question or error in the proper bookkeeping or record of costs. The sheets shown in Figs. 21 and 22 are both from loose-leaf books.

Method of Handling Accounts Payable. The method of taking care of the payroll has already been outlined and we therefore proceed to the cost-analysis method of taking care of accounts payable and material bills. It is preferable to have accounts payable handled under monthly vouchers.

Voucher Check. Two methods are suggested, of which preference is given to the second. By the first method all invoices from any particular firm for the month are audited and recorded on the face of a voucher form, see Fig. 23, the reverse side of which is in the usual check form. A duplicate of this voucher is prepared with the original by means of a carbon sheet, the reverse side showing distribution. To this duplicate are attached all the original invoices, and thus duplicates and invoices are filed alphabetically, while the original voucher checks are filed consecutively by number. By this method a record is kept both alphabetically and numerically; the two are folded,  $3\frac{1}{2} \times 6\frac{1}{2}$  inches, and filed in pigeon holes or boxes.

120

#### COST-ANALYSIS ENGINEERING

121

Voucher Form with Separate Check. The second method, however, is recommended inasmuch as it is sometimes impossible to clean up all accounts monthly. The difference lies in the fact that all invoices are attached to the original vouchers. After they have been submitted and approved, payment is made by check, the voucher having space for voucher number and also for check number, Fig. 24. Since payment is made by check and the voucher remains in the alphabetical file, the same results are obtained as

Fig. 24. Typical Form Printed on Face of Voucher Envelope in Which Are Placed All Records of the Job

by the previous method, except that we overcome the objection of the banks to handling folded voucher checks and we have the opportunity for the payment of the voucher in installments. The ordinary form of check book is all that is necessary.

Voucher Envelope. A decided improvement over this method consists in having the voucher, Fig. 24, printed on the face of an envelope within which are contained all the invoices for any one particular firm for one month. By this system not only do we obtain a distribution of the account but we have a record of every

411

invoice. The opportunity is given for a definite statement of the time of payment, check number, and receipt of any one invoice or of all invoices. At the same time reference is made to the page of the ledger upon which the particular account is carried.

If there is no question as to the account, the contents of the envelope need not be disturbed. Should there be any argument, the face of the voucher envelope gives the record, which may be

Fig. 25. Check Distribution Stamp

index is at once obtained by which to refer to the numerical file of canceled checks. Under these conditions the ledger becomes simply a permanent book of record, inasmuch as the complete detail appears on the voucher envelope, Fig. 24.

It will be noted that on the Payroll-Distribution sheet, Fig. 22, the column is divided so that in addition to the cost of labor the record of amount of work performed may be entered, so that we may thereby arrive at the unit of cost of the work. From this

verified by the contents of the envelope; in case there is a question as to payment. an index is given to the different payments and check numbers, which may be investigated to ascertain whether a check was properly received and endorsed. This latter system is recommended as being combination voucherя. and-filing system, adaptable to any office, large or small

Should a creditor ask for an accounting and a checking up of account for any length of time, all that is necessary to do is to refer to the alphabetical file containing his envelopes month by month. An

record, in connection with the material distribution, we are able to prepare statements at any time showing how the work is proceeding with reference to the original estimate. The necessary information relative to the quantity of work performed is taken from the reverse side of the Time sheet, Fig. 19, supplemented by office records and information not obtainable in the field.

Payment of Accounts. In the payment of accounts the ordinary form of check book may be used, upon the reverse side of the stub and check being stamped a form similar to Fig. 25. At the time a payment is made this form is filled out with the job number and the account number, using the numerical index at the head of the column on the distribution sheets. If necessary, additional information may be shown by indicating under "Items", what the payment is for. Such a check becomes a voucher check which is explained by the voucher envelope on file in the office, and the endorsement of such a check is not only a receipt for payment, but indicates at once the account for which payment was made. Inasmuch as upon the reverse side of the stub appears the corresponding distribution record, the distribution sheets may be posted from the stub book.

This system is not in any sense complicated and may be developed at a trifling expense for printing and rubber stamps; since it is adaptable to any job, large or small, and to any number of jobs, it is deserving of consideration.

The voucher envelope bearing as it does a file number which is the job number, the files for each job may be kept separate. On the other hand, the system may be used alphabetically and all accounts filed accordingly. The latter method is probably preferable, because the information is more readily obtainable and, when the distribution at the left-hand side carries the job numbers, any one account may be carried together for the month, regardless of how many jobs are in progress.

**Special Distribution Accounts.** Liability Insurance. Liability insurance, already discussed fully, requires a detailed payroll distribution, such as Fig. 22, inasmuch as the various classifications of labor are rated differently. The contractor will more than pay for the extra time, trouble, and cost necessary to keep a set of distribution books by securing the benefit of a closer classification of rates. At any time the liability company's auditor appears, a complete summary of the payroll is shown, with the members of each class of work grouped in the proper columns. By lumping the payroll, it may bear the maximum rate, whereas, if classified, a reduction is secured in the total premiums paid.

Separate Account for Each Section of Work. In case of large construction, the division of the work by sections is of the utmost importance, and it is recommended that each section be considered as a subcontract and the material and payroll costs distributed accordingly. In other words, instead of carrying a job as a complete whole, we divide the total into sections in accordance with the original Outline of Work, and Itemized Estimate, and maintain a separate account for each section so that we have distinct time and work reports and separate distribution sheets.

By adopting this method, the work of the field forces and of the office are harmoniously adjusted and the work of the cost analysis at the completion of the contract is very much simplified.

#### **Cost-Analysis Progress and Final Charts**

We will next take up the question of the analysis of the result as shown by the field and office bookkeeping system, with the idea of using progress estimates and progress charts.

Value of Progress Study. Analytical progress study is not only intensely interesting but is of the greatest importance to the up-todate superintendent, inasmuch as, through the information furnished by the proper recording of the results of the work, he is able to discover the weak points and to direct his best attention to them instead of considering the whole work. Without such detailed information the superintendent is absolutely at a loss to prepare any record; he may be intelligent enough to recognize that certain parts of the work are not proceeding properly, but he cannot be as strong a man as he would be if the record and every part of the work were so tabulated that day by day he could adjust his forces and revise his methods to gain the lowest cost.

**Progress Charts.** In beginning the construction we have as a basis for our cost keeping and cost analysis the Itemized Quantity Estimate, Fig. 13, and Itemized Cost Estimate, Figs. 14 and 15. In connection with these estimates we have our sketch plans

properly divided into sectional divisions, illustrated by Figs. 8 and 11. We have shown that these sketch layout plans are of benefit in the proper analysis of the work previous to the preparation of the estimate and proposal.

Now, in order that we may conduct our work harmoniously with reference to this preliminary study, these sketch plans must be developed and perfected and general progress charts prepared. These give a picture of the work to be performed, and by the use of colored pencils on the face of the chart the progress of the work can be indicated day by day. In all of the study of Cost-Analysis Engineering, in the preceding discussion, and in the reference to forms for estimates, bookkeeping, etc., the effort has been made to recommend such forms as may be used for different jobs regardless of their character, and there is no doubt but that this can be accomplished.

Features to Be Recommended. When it comes to the subject of progress charts, there can be no standard—as every job must necessarily be handled with reference to the character of the work—but we make the following recommendations:

(1) The general progress chart should consist essentially of a condensed plan, or profile, or both, on a small scale, thereby not only serving the purpose of a progress chart, but also giving a picture of the entire work to be performed, with the various parts in their proper location with reference to the work as a whole. It is needless to say that in making such small plans it is necessary many times to distort certain detail features, but the general layout may be so drawn as to be strictly to scale.

(2) These progress charts should be supplemented, where the work is divided into many sections, by tabular information which would be confusing if the attempt were made to make notations directly upon the plan. This idea is illustrated by Fig. 7.

(3) These progress plans should be supplemented by detail large-scale progress charts for each section of the work. These detail charts need not be finished drawings, in fact they may be very crudely prepared, and generally can be obtained by quick tracings from that portion of the working drawings under consideration. They are to be colored in detail, and should be considered in the cost accounting accompanying the time sheets. Generally speaking, such charts (see Fig. 10) will remain on the work

#### COST-ANALYSIS ENGINEERING

126

for inspection during the week and will be sent to the bookkeeper at the end of the payroll period, for a recording of quantities on the payroll distribution book. These detail charts not only serve the purpose indicated of supplying the data for the computing of quantities, but they also serve as a permanent record of the work accomplished during any period; and this information is a great many times of the utmost importance in financial settlement of the contract, especially where the latter goes into litigation.

Analysis of Typical Progress Charts. Sewer Contract. The preparation of the progress chart depends entirely upon the character of the work. Figs. 7 and 8 give an example of the method of handling a sewer proposition. Fig. 10 shows the preparation of the detail progress chart, covering section A, shown in Fig. 8. From time to time the progress of this section is marked by the use of the colored pencils, indicating the advancement of the excavation. concrete forms, back fill, etc. The chart is nothing more nor less than a quick tracing from the working plans and profile with the addition of the 10-foot station lines and the horizontal lines below the base line of the profile for the purpose of providing space to indicate the dates of advancement of each class of work. These sheets also offer the opportunity for notation as to the exact point at which special difficulties or extra work were encountered. From time to time, as these progress reports are turned in at payroll intervals, the general progress chart is so colored as to indicate the advancement of the contract as an entirety.

Reinforced-Concrete Conduit. Fig. 11, in its final form, was supplemented by profiles and tabular information, the same as Fig. 8, but, since in this case the work was of very nearly uniform depth, the width of cut, and character of excavation, different forms of detail sectional progress charts were adopted.

As this conduit was to be built through the principal portion of a large city, it was known that interferences and complications would arise, due to sewers, water and gas pipes, street railways, etc., and that many modifications, changes, and special work would be required. Sheets were therefore prepared, showing the work in plan on a scale of 1 inch to equal 20 feet, Fig. 12, and upon this sheet was indicated the location of these complications as they were encountered. When the work was completed these detail progress charts. with the accumulation of notes made thereon, became a very valuable source of information. They were not only valuable in the final adjustment of the contract, but a copy was furnished the client and served as a permanent record, showing the work as actually constructed in its position with reference to all of the previous underground and surface work.

Miscellaneous Contracts. In the case of a building it is generally possible to combine on one sheet the foundations, floors, and roof - by separate sketch plans. These sketch plans may be distorted in scale to show columns clearly, and by a multiplicity of lines around the exterior of the building indicating progress of walls, facing, etc. It is also sometimes advisable to sketch longitudinal transverse sections which constitute in a sense the general progress chart. Naturally, any work such as a building, which is almost entirely above ground, need not be treated as elaborately as underground work where, unless the records are taken during construction, the completed work is covered and concealed for all time.

Bridge work may be treated the same as building work, except that all that is necessary is a plan and a longitudinal section.

Street paving—sidewalk work—yields itself successfully to the method employed for sewer construction, Figs. 8 and 11.

**Progress Photographs.** At this point it is well to call attention to the fact that no work of any consequence should be constructed without progress photographs. These photographs should be taken at regular intervals, coincident with the end of the payroll period and the coloring of the progress chart. Under this systemwe thus have a thorough field record of the job: viz, by the time sheet we have a record of the forces employed, the cost thereof, and where such labor was employed; by the colored detail progress chart we have payroll dates, a complete record of the work accomplished, and the progress of the various kinds of work; and by the photographs we have a pictorial record substantiating the first two records.

These photographs should preferably be  $8 \times 10$  inches and should have marked on the plate the file number, date, name of work, name of contractor, and name of photographer. They should be kept in consecutive order in a binder. In case of

127

trouble or litigation in making a statement, these photographs may be identified by notations on the back with reference to plans of the work and with reference to time sheets and progress charts.

**Progress Estimates.** Material in Hand. At the end of the payroll period we have in the office, therefore, the time sheets and our progress chart, showing the completed work. The quantities of work to date, as shown by the progress report, are computed, and this may be done very quickly if the Itemized Quantity Estimate, Fig. 13, has been properly prepared in detail. Emphasis is again laid on the fact that this Itemized Quantity Estimate is of constant value as a reference sheet during the progress of the construction, and saves many an hour in supplementary recalculations. The labor cost and these quantities of work are now recorded in the "Payroll-Distribution Book", Fig. 22.

Continuously during the progress of the work the invoices for material purchased have been received; and, where there is any question as to what the material is to be used for, such information has been obtained from the field forces. It is customary to mark invoices as soon as received with a stamp calling for approval, and provided with a space for the information, "For What Used". This detail distribution of material is now posted on the "Material-Distribution Book", Fig. 21.

Final Form of Estimate. From this information we may now proceed to make a progress estimate which should follow the same form as the Itemized Cost Estimate used for the original proposals (see Fig. 14), making changes only in the quantity of work to be done (in case it has been demonstrated that the preliminary estimate was wrong) and in the unit prices in line with the contract prices for material, and the cost of labor as shown by the timekeeper's report. Such a progress estimate serves as an analysis of the work to be done in the light of growing experience on the work itself. The method will give a better idea, than will the regular books, of the actual condition of the work from time to time with reference to its money-making or losing status and the probable outcome.

Value of Progress Estimates. These progress estimates furnish the information as to the probable final outcome, but they also show in detail just where the modifications have occurred, and in what work the gains or losses are being made. This

knowledge is valuable, as it enables us to put our best efforts on the losing parts.

To one familiar with the work, it takes but a short time to prepare such progress estimates; and the one making them will be many times surprised to find that a careful analysis of the work shows his personal observation in the field to have been in error. If the work in the field is proceeding satisfactorily, and excavation is being crowded to keep ahead of other classes of work in which we are possibly more interested, we may lose sight of the cost of this excavation work; but, a study of the progress cost-estimates, may change the methods of excavation or even readjust the progress of the work, in order to keep the cost within reason. In other words, it is possible that a loss on the heavy bulk of excavation, at a few cents per yard, is more than can be overcome by a large decrease in unit cost of the relatively smaller quantities of concrete work which we are pushing at the expense of the excavation cost.

These progress estimates are essential; they are to be prepared in the office, and kept for office records. Construction work is always in a rush; and the activity gives no time for the study of a long column of figures, in order to refresh the mind as to the conditions on any one class of work, or in one section.

Progressive Summary Charts. For this reason, as a last step in the line of progress charts, after the progress sheet has been prepared. a "Progressive Summary Chart" should be made, as shown in Fig. 26. In concise form it furnishes quantities, costs, and dates. It shows on one small sheet how the work is running with reference to the estimate, and what the outcome will probably In other words, it is a complete summary of the job, and it be. may be condensed on a chart so small that one can be carried in the vest pocket. It serves to jog the memory as to conditions. The chart cannot lie, and will not allow the superintendent to deceive himself or to gloss over conditions and make excuses as to costs, either to himself or to his employer. This form of progressive summary along the lines suggested by the writer appeared in its first crude form some time ago in Gillette and Dana's Cost Keeping and Management Engineering, and was printed with modifications in Handbook of Cost Data. The foregoing outline of progress charts and estimates may seem complicated, but in reality

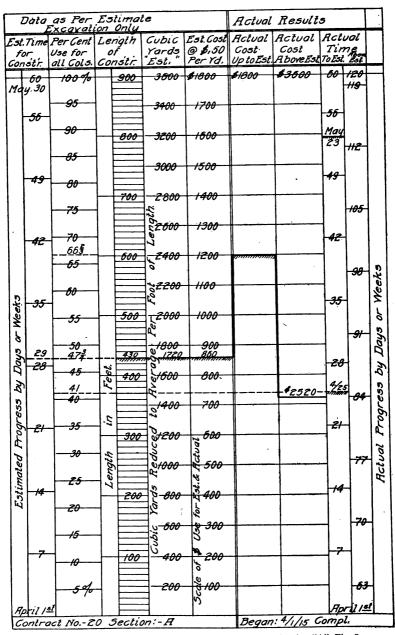

Fig. 26. Progressive Summary Chart for Excavation of Section "A", Fig. 8

420

that is not the case. It is not expected that finished drawings be prepared. During the progress of the work calculations must be made continuously; if they are put on scraps of paper, or in a notebook, none of these records are in such shape when the job is completed that they are really valuable for reference; in fact, nine times out of ten they cannot even be found. But by the simple system of progress charts the information is obtained and a record preserved for all time; and it is just as easy to make the notes on a proper sheet as on the back of an old envelope.

Analysis of Progressive Summary Chart on Excavation Job. The Progressive Summary Chart, illustrated in Fig. 26, covers the subject of excavation only, since it is desired to make the explanation of the chart's use as simple as possible. The chart, however, can be extended so as to cover several lines of work on the same or separate sheets. Its use is essential to a complete summary of the work as estimated, and as a record of actual progress. The unique feature, and always the most important one, is the percentage column, by means of which the progress in time, length, quantity, and cost may be compared with the estimate. For instance, in the illustration given, we have in construction a piece of excavation work 900 feet in length, amounting to 3600 cubic yards, which, at an average price of 50 cents per cubic yard, amounts to \$1800; and the work can be done in 60 days. All of these items are so adjusted in their divisions by the scale of their corresponding columns that the total appears posted on the 100 per cent line.

The chart is divided into "Data as per Estimate", and "Actual Results". Referring to this, let us consider a certain stage, April 25, when 430 feet in length of the work, begun April 1, have been completed as per the notation made on the chart to this effect. These figures correspond with 1720 cubic yards, which should cost, according to estimate, \$860. By referring to the percentage column, we note that this is  $47\frac{3}{4}$  per cent of the entire work, and that, according to schedule, we should have been employed upon the work 29 days. The right-hand side, Actual Results, shows us that actual cost has been \$1200, or approximately 70 cents per yard; but that only 25 days have been expended. Turning to the percentage column, we note we have expended  $66\frac{2}{3}$  per cent of our estimate, 41 per cent of our time limit, and accomplished  $47\frac{3}{4}$  per cent of the work.

421

131

:

The right-hand side double columns are for the cost and time and are so arranged that, in case the estimate is exceeded, there will be opportunity for the recording. The illustration just given from the chart, makes it apparent that the cost is exceeding the estimate and will result, if continued, in a final cost of \$2520, instead of \$1800; at the same time it is also demonstrated that at the rate of progress shown the work will be completed in 53 days, or 7 days less than the schedule. By using the percentage column as a schedule for the comparison of time, quantity, and cost, a complete record is available at all times, together with indications of the probable final result.

The chart may be arranged so as to meet any condition; for instance, instead of length of construction, square feet, or any other unit of measurement may be substituted. The cubic-yard column may be divided in any convenient unit of measurement. Attention should be called to the fact that the column used for cubic yards, Fig. 26, is shown as an average uniform quantity over the entire length of the work. Where the work is very uneven it is perfectly feasible to divide this column, so that the proportions of heavy and light work shall be located exactly as they appear. In other words, this column may be made in a sense a miniature profile of the work, so adjusted that the same results may be attained. This suggestion is deserving of study to the end that the individual student of cost analysis may adapt it to his line of work.

The foregoing description and chart cover only one kind of work, but treat of all elements of that one line. On large and important work such a chart should be made for each classification. On small work several branches can be placed on one sheet, thereby taking care of the entire job.

Final Progressive Summary Chart. The cost of the work is, after all, the main item; and a "Final Progressive Summary Chart", Fig. 27, should always be added to the records, especially for pocket reference. This chart is of slightly different form, in that the quantities are not incorporated; instead, each branch of the work and the total are carried at their estimated cost equal to 100 per cent, with a provision for an increase in actual cost of 50 per cent. The chart shows constantly how each line of work is progressing, and, upon completion of the entire job, shows detail results.

#### COST-ANALYSIS ENGINEERING

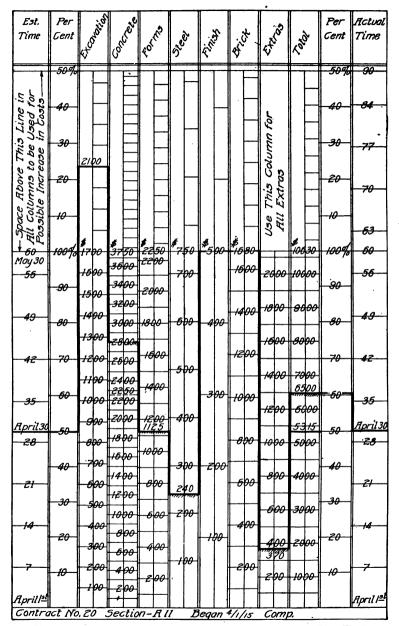

Fig. 27. Final Progressive Summary Chart for Sewer Job Shown in Plan, Fig. 8

423

133

Analysis of Chart. Let us suppose the job opened April 1, and that we examine the conditions on April 30. On this date it should be 50 per cent completed; and our cost, to conform to the estimate, should not exceed \$5315. We know, however, that our cost is \$6500, or 60¹/₄ per cent. Why? Referring to the conditions as of April 30, noted on our chart, Fig. 27, we find the excavation complete at a cost of \$2100 exceeding our estimate by \$400 or approximately 22 per cent. Sixty-two per cent of the concrete has been placed at a cost of \$2800, when, according to the estimate, it should have been done for \$2250---increase of cost over the estimate for this item of approximately 23 per cent. The cost of forms we find to be running properly with the estimate, at \$1125. Fifty per cent of steel labor is estimated at \$375. Our cost is only \$240a saving of \$135-or approximately  $22\frac{1}{2}$  per cent of the cost of constructing 50 per cent of this work. We find that there has developed \$370 in extras. Omitting the extras this leaves a net balance of excess cost over estimate of \$815.

R-adjusting Estimate. Now, assuming at this date that the branches not yet started can be built for the estimate, we make our progress estimate, allowing for increases and decreases, and find as follows:

	Соят			
Ітемя	Increase	Decrease		
<ol> <li>Time O. K.</li> <li>Excavation, complete</li> <li>Concrete, new estimate</li> <li>Forms O. K.</li> <li>Steel, new estimate</li> <li>Finish, assumed O. K.</li> <li>Brick, assumed O. K.</li> </ol>	\$400 917	\$270		
Net increase Total first estimate	<b>\$</b> 1047 10630			
New estimate	\$11677			

The chart enables one to read all this information at a glance, and such detail readings as just given are not necessary in actual use. Differently colored pencils are used for successive dates. The charts can be made on any size sheet, inasmuch as each column is of a different scale in order to reach the 100 per cent line.

424

It should be noted that Figs. 26 and 27 are constructed on a somewhat different basis. Fig. 26 provides two columns for actual cost, with a possible increase in cost up to twice that estimated. In the make-up of Fig. 27 the 100 per cent line is placed at two-thirds the sheet's height, thereby allowing for a 50 per cent increase of actual over estimated cost. The method is open for selection.

Use of Diagonal Scale in Making Charts. It might be said that the chart is too difficult of preparation, but this is not the case

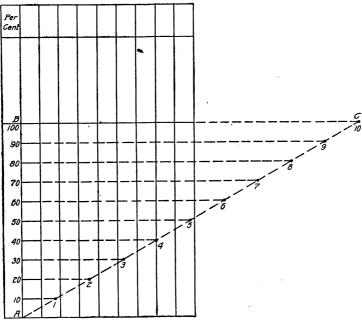

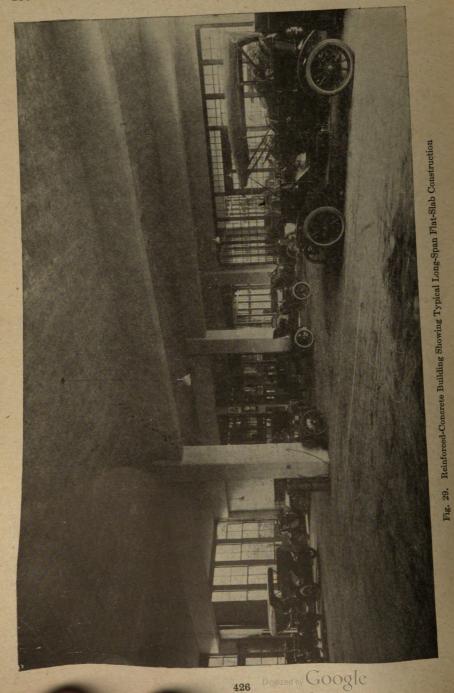

Fig. 28. Chart Showing Method of Dividing Distribution Items to Scale

when the diagonal-scale method is used for calculating the divisions of the various columns. In Fig. 28 is shown a chart to illustrate the method. For our purpose we will construct the ten divisions of the percentage column. Extend the 100 per cent line indefinitely to the right, as BC. From point A, on Line 1 of the column, draw a slant line AC by so adjusting 10 equal divisions of the scale placed diagonally that, beginning at point A, the tenth division just reaches line BC at the point C. Mark all ten points and draw horizontal lines to column AB. All these lines, except those making the chart, should be in light pencil.

# COST-ANALYSIS ENGINEERING

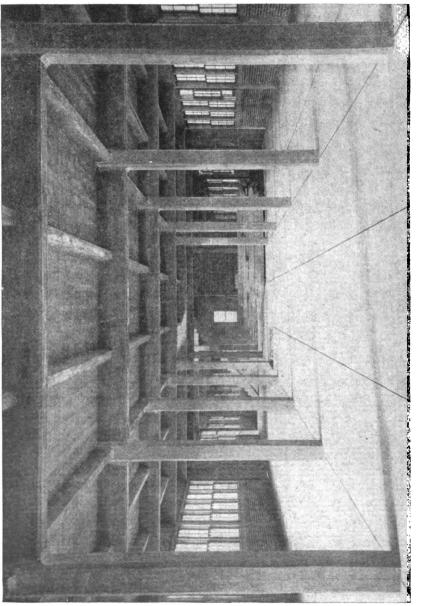

Fig. 30. Reinforced-Concrete Building Showing Short-Span Construction

137

Digitized by Google

Similar Jobs Requiring Different Cost Distribution. In closing the section on the construction end of our cost-analysis work, it might be well to illustrate how jobs which are more or less similar in appearance, Figs. 29 and 30, radically differ in cost-analysis distribution of labor and material. In Fig. 29 is shown a long-span flat-slab construction, where the amount of forms for the proper construction of the columns and girders is reduced to the minimum, but there is heavy work in connection with the centers to support the long-span slabs forming the floors. In Fig. 30, we have a lighter construction where the forms are largely increased because of the many columns, main girders, and floor beams. In the latter case the timber work necessary to build the forms furnishes to a very large extent the support for the centers.

Both of these buildings were of reinforced-concrete construction, very nearly the same in external appearance, and, so far as the cost bookkeeping was concerned, each would have the same charges for lumber, cement, stone, gravel, sand, tile work, etc. The cost engineer with his system of distribution must analyze these costs and record them in the proper way so that accurate analyses can be provided and future comparisons made.

## WHAT IS GAINED BY ANALYSIS?

What Cost Analysis Means. We have reached the point where, in the logical sequence of actual work, our records are completed and we are ready to make a final analysis and summary of our results and experiences. It would seem that few have a proper idea of the meaning of the phrase "Cost Analysis". Time and time again articles on cost analysis have been called to our attention which were nothing more or less than a bare statement of cost records; and although in a great many cases these cost records were divided in an intelligent manner to form the basis of cost analysis, still in no sense could they be said to be real cost analysis. The name implies such a systematic study of results secured on each job, that all forms of digest or cataloging information-as illustrated by differences or inconsistencies-are harmonized, and all jobs brought to a comparable basis. In other words, cost analysis in this final summary eliminates nonessentials, individualities, and specialties; reduces to a uniform basis the pay, hours of

428

work, etc., to the end that we may reach a point where the results can be tabulated on a comparative scale.

Analysis on Foot-Pound of Work Basis. Such a cost-analysis summary implies also a study of the work accomplished in a broader sense than simply as so many cubic yards of earth excavation, cubic yards of concrete, thousands of brick laid, or feet board measure of lumber. Such an analysis takes into consideration the conditions under which the work was done, giving due credit for location of raw material and methods of operation, extent of work under construction, and the average unit of work.

We are, in reality, approaching the ideal which is to reduce our cost to a basis of foot-pounds of work, although we are doing so only in a very crude manner, since we use ordinary standards of measurement in order to introduce comparisons. It is certainly true that the ordinary laborer is capable of so many footpounds of work per day. If his time is expended in doing work at a long distance from the point of supply his energy will be expended in distance at the expense of actual quantities handled. If, on the other hand, the work is arranged either naturally or by proper supervision, so that large quantities can be handled with the minimum of effort, the cost per unit of quantity is correspondingly decreased.

If we should attempt to analyze completely every job within the limits of practical supervision so that we might trace the footpounds of work of each operation for each class of labor, we should be doing nothing of real value because of the difficulty and cost of securing information; but it is entirely possible to estimate on a basis of arbitrary units for the different classes of work, and so to secure the same relative comparisons without difficulty. Such arbitrary assumptions, based upon our familiarity with the work in question, furnish a definite basis for recording the information obtained.

### ANALYSIS OF ACTUAL WORK

**Reinforced-Concrete Building.** As an illustration of our idea in this connection, let us consider a job in reinforced concrete. The cubic feet of concrete to be placed in the building, bridge, or other structure, divided by the square-foot area covered, give

429

the average thickness in feet, of concrete. This is an arbitrary indication of foot-pounds of work necessary, since it indicates, without any direct statement of distance or haul, the foot-pounds of work and energy expended in order to place certain work. We are, of course, assuming that the locations of material supply, equipment, etc., are normal, that is, as closely connected with the actual work as may be usually expected. (Conditions other than this should be specially noted.) The results for reinforced-concrete building work are shown in graphical form in Fig. 31, indicating

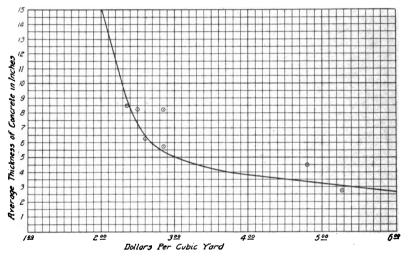

Fig. 31. Curve Showing Variation of Cost per Cubic Yard of Reinforced-Concrete Building Work with Thickness of Concrete in Inches

increase in cost of work accomplished, due to distance and to decrease of thickness. The same style of chart may be used for bridge work, pavements, sewers, sidewalks, etc.

Sewer Contract. Fig. 32 gives such a form of analysis carried through the construction of the sewer job shown by Fig. 8, with special reference to the concrete work. The arbitrary unit in this case is the cubic yards of concrete per lineal foot of sewer; in the job there are many different sizes of sewers.

Applying this idea to the construction and placing of steel centers or forms, it is insufficient to say that this cost is so much per lineal foot, inasmuch as we are certain that the cost depends upon the size of the sewer; the next job we have for estimating may give

430

140

an entirely different size or a different proportion of sizes. Suppose, however, that we analyze the situation and consider the square feet of forms set, taking the intrados, or, in other words, the inner circumference of the arch, and reduce our cost to a square-foot basis. We find very interesting figures that are immediately valuable for future estimates on any other work. (See Fig. 33.)

Pavement and Sidewalk Work. To a certain extent the same conditions govern in pavement or sidewalk work, both in the foun-

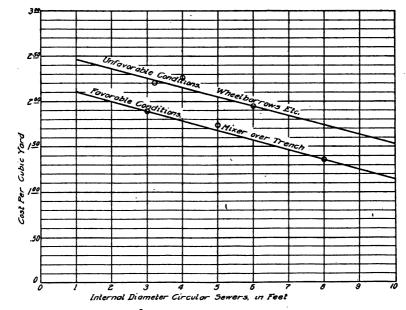

Fig. 32. Curves Showing Variation of Cost Per Cubic Yard of Concrete in Sewer Job, Fig. 8

dations and finishings. A walk 4 feet wide and a street 25 feet wide cannot be built for the same cost per square foot as a 25-foot walk or a 50-foot street—that is, so far as relates to the unit cost of work accomplished.

General Suggestions. Cost analysis is not cost recording, no matter how elaborated the latter is, or how detailed. Cost analysis is based on cost records properly segregated, but the analysis separates unfamiliar items into a special group by making a note of them, and so divides and classifies the different elements of work

141

**431** 

-the quantities, units, hours, and rates-that all jobs may be compared on a certain definite uniform basis.

Each Should Develop Forms for Himself. Much depends on the individual and therefore it is not possible to lay down fixed rules. The illustrations accompanying this paper show how these methods may be applied to practical and actual conditions, but the use of identical forms is not recommended. It has been the writer's desire to suggest rather than dictate, and to stimulate

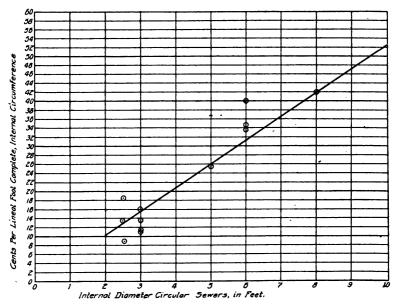

Fig. 33. Curve Showing Compilation of Cost Data on Sewer Job for Use on Other Contracts

the cost-analysis turn of mind, which will prompt each man to develop his own forms.

Figs. 31, 32, and 33, illustrative of the final analysis of cost are based upon actual working jobs, and the methods outlined are those developed in actual contracting practice within the writer's own organization. The curves illustrate how the individual may tabulate for future reference the results secured through his own cost-analysis methods.

Charts Up-to-Date. It should be borne in mind that these cost-analysis charts must be kept up-to-date; that is, as fast as new records are secured, they should be plotted upon the charts for

142

432

143

comparison with past work. Either confirming or modifying such experience, they will better qualify the estimator for new work.

Reducing Wages to Uniform Wage Scale. It should also be borne in mind that such a cost-analysis chart must be necessarily reduced to a uniform scale of wages, but this in no way makes it difficult either to prepare or to use in estimating. It is not expected that any job can be carried through at a uniform or definite scale of wages. There will be many rates of pay, and men of different trades, rates, and hours, but in the operation of the payroll the charge of the hours should be carried forward the same as the total dollars, and in this way the average rate of pay is again determined. Every contractor familiar with his own work has a very certain idea about his average rate of pay for labor per hour. However, the payrolls should be totaled for work-hours as well as dollars, thereby giving the average rate for labor.

It is best to prepare the charts on a basis of, say, 20 or 25 cents per hour and then reduce or increase this rate as the case may be. This is, of course, for work of ordinary labor and for very few skilled artisans. To reduce the reading in the chart to a  $17\frac{1}{2}$ -cent-perhour basis from the average of the 20-cent-per-hour basis, all that is necessary to do is to deduct  $\frac{1}{8}$ . Fig. 31 shows the results of numerous jobs of reinforced-concrete building work. These jobs covered all designs and classes of structures, viz, light and heavy reinforced-concrete slabs, with and without beams and columns. The average of all concrete over the entire area is indicated by the scale, giving the thickness in inches.

Plotting upon this chart the actual cost per cubic yard of jobs of various character, we arrive at a very satisfactory curve line, indicating what may be reasonably expected in new work. Naturally there are a few abnormal cases, generally caused by special conditions. It should be noted that the average conditions are found between the limits of 5 inches and 8 inches, or an average of  $6\frac{1}{2}$  inches at the apex of our curve. Above this limit, as the thickness increases, the cost decreases very slowly. Below this limit, as the thickness decreases, the cost increases very rapidly. This is logical and is an example of the foot-pounds of work accomplished by the laborer.

433

Discriminating between Classes of Work. In Fig. 32 is another example of sewer construction in which various sizes of the concrete work determine a fluctuating price of labor on concrete per cubic yard. In this case an attempt has also been made to discriminate between (1) that class of work which can be handled over the trench as the work proceeds, the concrete operations being advanced as the work is completed; and (2) work in which the operation must be handled from some little distance and the material wheeled, the plant advancing only at intervals.

On no one of these charts can we expect to arrive accurately at foot-pounds of work. But this is not necessary, for as has been mentioned, we are working along a certain definite line of information, wherein, from the time of the preparation of the estimate until the final cost summary of the job, our methods have been harmonious and on a certain definite basis. To the individual contractor the information compiled is of the most value, as the moment a certain job is called to attention, reference to these charts presents to his mind a picture of the particular job, which is explanatory of the results. For this reason it has been brought out time and time again in this article that the value of the methods suggested lies in their constant adaptation to the individual man's work.

Any System Must Be Consistent. Ruskin says "The crime which bankrupts man and nation is job work, declining from the main design, to serve a turn here and there." Certainly no really good results can be expected from any system of estimating, bookkeeping, operating cost keeping, and analysis which is not entirely consistent in all its parts.

Fig. 33 shows the analysis of the cost of installation of steel centers in a number of concrete-sewer jobs. This chart is based upon a table from which we arrive at a nearly uniform price per square foot for centers of any size of sewer within reasonable limits. The square foot is arbitrarily taken as the complete internal circumference of the sewer, the sewers in this illustration being all circular. In order to reduce our figures to as comparable a working basis for estimating as possible, and also to present to the eye as clearly as we can a complete summary, we prepare a chart from which we may take directly in cents per lineal foot the cost for labor on centers for sewers of this character.

The same comments made in the previous case relative to the making of the chart on a uniform rate of pay, apply also to this one.

It should be noted that on all of these charts a definite purpose is attained—a presentation of past experience and future probabilities more graphic and usable than tables of figures. Such a chart, however, should not be used without mental analysis of the new job in question, and results shown must be given careful consideration.

Systematic organization demands recognition of the fact that a system once adopted cannot be modified and must not be disturbed or reorganized because of the individual ideas of any one man. Improvements may be suggested and recorded and tried out as new work requires, but this should be done gradually with correlation throughout the departments. The hardest taşk for the contractor is to insure that the men employed do not incorporate some particular ideas of their own minds—inventions, or practices learned in previous employment.

The worth of the final analysis in the preparation of these charts depends upon the individual. It would be a very easy matter for the writer of this series of articles to submit thirty instead of three examples, but the principles would not be any further advanced by so doing.

**Description of Final Analysis Chart.** Fig. 34 illustrates what may be obtained in the final analysis of a construction job by maintaining a proper cost distribution.

It is not generally necessary to prepare such a chart but in the particular case to which this one refers, final adjustment was made through litigation, and in order to present the matter to the court this chart was quickly prepared. It shows the number of men at work each day, the rainfall or snow precipitation, the maximum and minimum temperatures, and the quantity of work accomplished week by week. The work covered by this chart is shown in the photograph, Fig. 20, and particular attention is called to the fact that the statement of conditions is graphically illustrated by the photographs which are numbered and listed on the days upon which taken.

The value of cost engineering is shown in connection with this particular job. When, after completion, it was necessary

COST-ANALYSIS ENGINEERING

to prepare a final statement on account of litigation, it was possible, since the cost distribution had been very carefully kept, to prepare a statement covering the following actual conditions by detail classifications.

#### FINAL COST-ANALYSIS STATEMENT Job No.....

#### Sheet

- 1 Men, Hours, and Days worked on Retaining Wall.
- 2 Men, Hours, and Days worked January 18 to April 26.
- 3 Men, Hours, and Days worked April 26 to September 20.
- 4 Men, Hours, and Days worked September 20 + 2 December 13.
- 5 Summary of Quantities and Costs of Materials.
- 6 Summary of Quantities and Costs of Materials.
- 7 Unit Labor and Material Costs (Averages).
- 8 Unit Labor and Material Costs (Averages).
- 9 Quantities and Cost, Deck House.
- 10 Quantities and Cost, Chimney.
- 11 Quantities and Cost, Meridian St. Sidewalk.
- 12 Quantities and Cost, Retaining Wall.
- 13 Itemized Total Cost of Building and Extras, and Determination of Fixed-Charge Per Cent.
- 14 Summary of Cost, Fixed Charges, and Totals of Main Building and Extras.
- 15 Work Accomplished February 1 to April 26, and Unit and Total Costs for Same Period.
- 16 Work Accomplished April 26 to September 20, and Unit and Total Costs for Same Period.
- 17 Work Accomplished September 20 to December 13, and Unit and Total Costs for Same Period.
- 18 Summary Sheets 15, 16, and 17.
- 19 Calculation of Lost Time.
- 20 Damage and Money Loss.
- 21 Statement of Cost of Items and Percentages.
- 22 Final Statement against the Building Company.

Cost-Analysis Phases of Sewer Job. The case instanced above was one which, unfortunately, could not be adjusted without litigation. It should not be understood that cost-analysis engineering tends toward such final adjustments. Many times in construction work there are features of construction which cannot be handled except by actual accounting of material and labor on cost-pluspercentage basis. For example, Figs. 11 and 12 illustrate a job partially on a unit-price basis and partially on a cost-pluspercentage basis, it being necessary to record carefully the cost on each basis.

Unusual Features Encountered. This work covered the construction of reinforced conduits through the down-town streets of a large city. The so-called straight construction work covered something less than one-half of the total cost of construction. The force account, on a cost-plus-percentage price basis, covered slightly over one-fourth of the entire cost. The remaining cost was made up of extras or unusual items which could not, under any conditions, have been itemized had it not been for the efficient system of cost distribution and analysis. The work was a "rush job" and three shifts of labor were employed, working day and night.

The work was divided into sections as shown in Fig. 11, one of these sections being given in detail in Fig. 12. This job would have been a losing proposition to the contractor had it not been for the system of cost keeping and analysis. The straight-contract work covered only those features of the new construction which could be separated and listed on a unit-quantity basis, such as cubic yards of excavation, cubic yards of concrete, and pounds of reinforcing steel. The force-account items were occasioned by unusual features of construction, such as the supporting and protecting of existing water mains, gas mains, and sewers, as they were encountered during the progress of the work.

The contractor would have lost approximately 25 per cent of the total cost of this work had it not been for the system of costkeeping analysis, whereby, upon the completion of the work, he could present a complete itemized statement of the increased cost of construction which was not included either in the straight-contract items or in the force-account items. These unusual costs covered: increase of labor rates, due to rush work and overtime which necessitated men working at overtime rates and on double shifts; the extra excavation occasioned by caves and reconstruction of water and gas mains and sewers; the increase in cost of excavation on account of increased depth of trenches necessary to pass under obstructions; the change in location of the trench work, causing duplication of work and loss in material and labor: the increase in the amount of lumber and supports, on account of increased depths and changes; the increase in the amount of surplus excavation material, removed because of changes in depth of trenches and

151

Digitized by Google

change in style of construction; the increased cost of forms and centers because of change of design; and the demand that the progress of work be doubled, thereby requiring more material to keep in advance of the concrete workers and allow the finished concrete to set.

These items, each somewhat unimportant of itself, in the aggregate amounted to an increased cost, as before stated, of about 25 per cent of the money expended on the job as a whole. A mere statement of this fact would have had little weight with the owners, but there could be no argument when it was presented in detail—with an itemization showing each hour's work and each piece of material, where the material was used, how used, by what laborer placed, and, in addition, not only the day when used but the time during the day when the laborer was actually employed upon this particular piece of construction.

The final report upon this job, including all features, made a book of 184 pages, including blue prints, diagrams, and analysis of construction. The larger number of pages were consumed in itemizing the force account, but, even in such items, it is important that a contractor submit a report to an owner on a contract where the cost-plus-percentage, or cost-plus-fixed sum, is to be the method of payment, so that the owner may know in detail what was done and how; and such a report can be submitted properly only when cost analysis is used to prepare the records secured through cost keeping.

## COST ANALYSIS IN VALUATIONS

Importance of Valuation Work. The writer's present position as District Engineer of the Division of Valuation, Interstate Commerce Commission, occasions a reluctance to discuss valuation matters because any discussion of them may be taken as the statement of an official rather than as the personal opinion of an experienced engineer.

However, the subject of valuations, which is now so prominent in the minds of the public as well as with the engineering profession, is of such importance in its relation to Cost-Analysis Engineering that it seems necessary to consider it to some extent. In so doing, it should be *distinctly understood that the statements made* 

15**2** 

438

153

are not to be connected in any way with the writer's official work with the government.

Scope of Work by Interstate Commerce Commission. For some time past there has been increasing activity in the valuation and control of public utilities by state commissions. By an act of March, 1913, the United States government undertook the physical valuations of the property of all common carriers. The government inquiry to date has covered principally the physical valuation of railroad and telegraph properties. In order to carry out to the fullest extent the work called for by the act of Congress, it may be necessary ultimately to include electric-railway properties, express companies, pipe-line companies, steamship lines, long-distance telephones, and in fact, any and all carriers serving the public in an interstate capacity.

**Conditions Governing Valuations.** The study of Cost-Analysis Engineering in connection with valuation work presents entirely different conditions than those in connection with the estimating, construction, and analysis of ordinary construction work.

Valuation of New Work or Work in Process. In the case of construction work we proceed to make an estimate based upon the plans and specifications, in which the materials and the labor necessary to install them are described in full detail; from it we may have a fairly definite idea of what is necessary in the way of equipment and costs to assemble the structure as designed. It is true that we must depend upon our imagination to furnish a picture of the finished structure, and of the multitude of details necessary to complete it which are supplementary to the plans and specifications. It is also true that the estimator must fall back on his past experience and again upon his imagination to list and describe the accessory materials and labor required in connection with the construction and work of the various trades. These latter features will not be covered by the plans and specifications, since they are incidental to the work of the several trades, and an accurate estimate can be made only by the man who from experience with the different lines of work knows how much in the way of runways, mortar boxes, scaffolds, temporary lumber, steel, rope, bolts, etc., will be necessary to do that work which finally may be measured as a permanent part of the structure.

439

To summarize—in any ordinary construction work, we examine the plans and specifications and then form a mental picture of the structure as it will be when completed, but in so doing we have an accurate and full description of all of the materials and the manner of their assembling as they are to enter into the completed structure.

Valuation of Old Work. In the case of the valuation of construction work which is already completed or has been in use for some time, the process is not so simple. For example, we may have a building, which, to the observer, after completion, is a brick-wall structure. The interior is divided into rooms with plastered partitions. Now, as a matter of fact, the brick walls may be, as they appear, a part of the actual load-carrying parts of the building, but on the other hand, the brick may be only a masking or covering material for the steel framework which is the real structure of the building and which in reality carries the brick work as an additional dead load. The partitions in this building may be of tile or they may be of wood studding with wood lath or metal lath; or they may be entirely metal, that is, metal studding and metal lath. In any case, the partitions may be covered with old-style hair plaster or with patent "quick-setting" plaster. The floors may be covered with wood or tile. We may have a reasonable idea of how the floors are constructed, but so far as the observer can see, there is no way of determining just how the floor is secured in position.

Sometimes the plans and specifications for particular structures are available, but in a great many cases they are not. We are therefore dealing with the physical valuation of tangible property for the purpose of considering the cost of reproduction—usually the cost of reproduction of the property as existing at a certain date. Granting that the cost-analysis engineer has had an actual experience in construction work, and that he is dealing with structures where plans and specifications are not available, and where, therefore, the basis upon which the work was done, cannot be known, he is of necessity compelled to draw upon his imagination and experience to furnish a basis upon which the structure might be reconstructed so as to secure practically the same results as he finds, and to reduce to dollars the cost of duplicating the work. This means that, above all, the valuation engineer must use good judgment, and this judgment must be based upon experience.

440

Digitized by Google

**Depreciation.** The subject of depreciation in connection with valuation of property is of extreme importance. It must be given consideration in the making of any valuation, whether the resulting report controls the final valuation or not. Depreciation, when considered in the fullest extent, covers wear and tear, deterioration, inadequacy, obsolescence, and, where the structure is exposed to exceptional hazards, must take casualties into consideration.

A sharp distinction should be made between the wear and tear and deterioration of property, which may prompt the cost-analysis engineer to determine that the structure has a probable remaining life, and the other elements mentioned, which may radically affect the remaining life as so determined. As an illustration: A building may occupy an important business corner in a large city. So far as actual deterioration is concerned the building in question may be good for many years, but obsolescence, when considered in connection with the value of the ground occupied and the business demands of the community, might occasion the removal of the building within a few months.

It is not suggested nor recommended that these elements be given too much importance in field valuation work, but they must be given some consideration and be noted in the final report. The engineer is called upon to report facts to the fullest extent; he should report all facts as he sees them without attempting to make things appear favorable, if in his own mind they are not. There is nothing to be gained by deceiving with optimistic reports, or—to go to the other extreme—with pessimistic reports. The owner or employer is entitled to the truth, and to full information as to how the report is prepared.

What Constitute Valuation Values. Valuation cost engineering, therefore, must pass beyond a mere recognition of the physical elements which enter into a property and which would be reported under cost of reproduction. It must include a consideration of the location, the earning capacity, the investment possibilities, and the going value of the concern under inventory. It probably will not come within the province of the young engineer to decide these larger questions, his work dealing entirely with the physical examination of the construction materials entering into the structure; however, it is very much to be desired that he have the proper

156

conception of these larger elements of value so that he may correctly note field conditions and enable the more experienced man to place, if necessary, a judgment valuation upon these features.

Forms to Be Used. The forms and blanks used for valuation purposes, especially in the valuation of large properties, must of necessity be so condensed that it is impossible to show in detail all of the elements going to make up the quantity units or the unit prices as adopted. Generally it will be found that the state commissions, in connection with the valuation of public utilities, and the United States government, in connection with the valuation of common carriers, have prescribed standard forms which must be followed in accordance with standard instructions and the standard itemization of accounts. In the progress of valuation surveys, care should be taken to record systematically all the facts and also the quantity units and cost units as finally determined, so that in case it is necessary these calculations may be referred to; this feature should be carefully observed even if these preliminary figures are only in the shape of notations or pencil calculations on scratch-pad paper. The form of the calculation, while it is essential and should be uniform throughout in any valuation work, is, however, not so important as to be sure that, by indexing and cross-indexing, the calculations for any portion of the work as shown on the final assembly sheets may be quickly found, in case they are required.

Valuation Problems. Valuation cost engineering has to deal with large and important questions; a few of them are mentioned in order that individual study may be given, although in valuation work the young engineer will in most cases receive specific instructions as to how these matters are to be handled.

Cost of Production. The cost of production may be handled (1) simply as a matter of present materials and present costs; (2) on a basis of the average cost and general methods of construction prevailing over a series of years; or (3) by a thorough consideration of methods, materials, equipment, and costs as they existed at the time of the actual construction of the work. This latter method, in its fullest development, leans toward the appraisal upon a basis of the actual cost to date, which is necessarily an accounting proposition, the data to be secured from the books and

records of the company for verification by inspection of the actual work.

Accounting Problem. This naturally brings to our minds the fact that valuation cost engineering is not alone an engineering proposition but instead is very largely an accounting problem. The ideal combination for this class of work would be an engineeraccountant working in connection with the accountant-engineer. Inasmuch as such combinations do not exist except to a limited extent, the practical basis is the working together of the expert engineer with the expert accountant, so combining their work as to secure a proper report.

Effect of Changes in Neighborhood. Many times, in the appraisal of property, conditions will be found which are not at all the same as when the structures were built. Many times the building-up of the community as a whole has been occasioned by the construction of the property under appraisal. In cases of this kind it must be determined whether the property should be appraised as under the conditions existing at the time of construction or as of the day when the appraisal was made. This line of thought prompts us to consider whether at the time the actual construction was started it was necessary to wreck other and older structures or to move natural formations, which at that time interfered with the construction but which are not now in existence or to be observed.

Effect of Transportation Facilities. If property of some considerable age is under appraisal, consideration must be given present transportation facilities and the transportation facilities at the time of the building's construction. Improvements and availability of materials and supplies must also be studied with reference to both the present time and the time of construction.

Secondhand Values and Quality of Material. The appraiser must take into account the possible use of so-called secondhand material, and also, perhaps, the fact that materials and supplies in the older days were, in general, more carefully prepared and of a higher quality than those now commercially available. As an illustration—consider the much better quality, in dimensions and material, of wood framing-materials entering into structures built, say, 50 years ago.

Overhead Charges. The valuation cost engineer must also consider overhead charges, such as engineering contingencies,

443

interest, taxes, etc., having also due regard to the time necessary for construction. In doing this, he must pay attention to the conditions existing when the structure was built, and, so far as they may be estimated, those prevailing on the date of inventory.

Appreciation. If it is true that the cost-analysis engineer must give full consideration to *depreciation* and its relations to the various portions of the structure, then he must also give full consideration to *appreciation* in those portions of the property where that may occur. This appreciation may occur because of location or it may result from the peculiar adaptability of the property to the purposes for which it is used. It certainly is true that conditions affecting appreciation must be noted, if depreciation is to be considered.

In the determination of depreciation or appreciation, it is necessary that the individual portions of a property or of any one structure be separated and a weighted average secured. Generally, definite instructions will be given-in the way of a mortality tableas to the life of various classes of material, with reference to their use in the different parts of the structures. These tables can be used as the basis for a judgment report when actual inspection is made to determine whether the particular item should be given a greater or less life than that shown by reported statistics. Many engineers take the position that there is no such thing as depreciation. so long as a property is well maintained. We are not taking issue with this view, but inasmuch as we are here dealing with a question which has not as yet been finally defined or accepted for the purpose of universal practice, it is suggested that the young engineer give careful consideration to the various points mentioned; making his notes accordingly, and having in mind that by so doing the information is made available.

The items mentioned in Tables II to X, inclusive, pages 96 to 102, must be considered in connection with valuation work, and reference should be had thereto. These items are, in general, of such a character that they do not enter into the permanent construction of a structure and cannot be observed, but must be, as before mentioned, estimated on the basis of contributory expense.

Valuation Units. In valuations one of the most important features is the selection of the quantity units and the cost-price

units, and attention is again called to the fact that it is necessary, in order to determine such units, to divide the work under investigation into cost-analysis sections.

If the work has been carefully studied and so divided into valuation sections, we may then proceed to select those quantity units and cost units which are applicable to the particular section under investigation. We may recognize two distinct types of units, both for quantity and for cost, namely, simple units and composite or combined units.

Simple Units. A unit for the purpose of a valuation may be considered as that proper quantity unit to which may be applied an ordinary cost unit, at the point of destination or use.

The selection of the quantity unit is more important than the price unit. The first should be a standard, while the latter may be considered a variable, probably determined as the average over a term of years.

Ordinarily, the quantity unit which is adopted will be the natural, customary, or ordinary commercial measure established by United States standard, or by law, custom, trade rules, or local conditions. Sometimes, however, the unit is an arbitrary or selected one, formed by the conversion of a natural unit into another form, possibly for the purpose of pricing all elements on the basis of a common measure.

Illustrations of simple units are lineal feet, pounds, cubic yards of material, rules for brick measurement, or per load or per day for delivery of materials. An illustration of an arbitrary unit might be the case of filling material, foundation concrete, top coat, finishing, and curb construction in sidewalk work, changed to square-foot price; or the material and the carpentry work, and the work of the various trades on a building, reduced to a price per cubic foot enclosed.

In nearly all cases the natural quantity units in valuation work will correspond with those understood in building, market, and trade circles. Sometimes a natural unit becomes a composite unit through custom, such as a cubic yard of masonry. Arbitrary units are generally the result of a selection based upon experience, and in most cases are used for special purposes such as quick estimates or short cuts.

It should be noted that simple or elementary units exist in unit prices as well as in unit quantities. Depreciation on a natural or simple unit may be taken direct.

Composite Units. A composite unit is a combination of a number of natural units to form a certain standard form of construction—or at least a certain type of construction recurring many times—where the composite unit is recognized by the public or by the trade interested as being sufficiently well defined to be self-explanatory and sufficient in detail to serve the purpose of a unit for valuation.

As illustrations there might be mentioned a standard building, a concrete mixer, a car, a plumbing fixture installed, a standard door or window opening complete, a standard sewer catch basin, or a complete unit of any kind recurring frequently in ordinary construction.

It should be noted that composite units exist in unit prices as well as in unit quantities. Depreciation on a composite unit must be a weighted average.

Comparison of Units. Advantages of Simple Unit. (1) The closer analysis of the construction.

- (2) The opportunity for a direct, close pricing.
- (3) The opportunity for closer comparisons with work of similar character, but with varying quantities or proportions.
- (4) The tendency to produce more careful attention to details by field men and computers.
- (5) The obtaining of better reference cost data.
- (6) The sureness of completeness in final result.

Advantages of Composite Unit.

- (1) The opportunity for speeding the work.
- (2) The opportunity for criticism on minor points.
- (3) Reduction in the volume of work to be done.
- (4) Decrease in first cost of labor and dollars.
- (5) Establishment of a means for quick, approximate comparisons.
- (6) The measuring to the full extent of the experience and judgment of the engineer.

Analysis of Units. In the consideration of units a selection

Digitized by Google

## COST-ANALYSIS ENGINEERING

in many cases will be governed by the elements entering into the construction, and the following features should be considered:

- (1) In the selection of unit quantities at point of destination or point of use, analysis should be made of the make-up of the unit, with account taken of the material in its raw condition, the cost of acquisition, labor, and produce, cost of marketing, etc., and of the labor to manufacture, and cost to market the product at each stage of development.
- (2) In the determination of the unit cost to install, there should be included the direct labor, indirect or nonproductive labor, supervision, injuries, damages, expense items, repairs, rentals or depreciation of equipment, transportation cost, waste, insurance, interest, commissions, discounts, overhead expense, and profit if done by contract.
- (3) It should be noted that we may have natural or composite unit prices as well as natural and composite unit quantities. We may have (a) natural simple quantity units at composite unit prices, or (b) composite unit quantities at simple natural prices, or (c) composite unit quantities at composite unit prices.

As illustrations of each of these points, consider the following:*

(a) A barrel of cement, at mill price, plus transportation, plus unloading, plus hauling, plus storage, plus sack loss, plus insurance and interest; (b) standard mill work, at a per annum contract price, f.o.b. location; and (c) a cubic yard of reinforced-concrete culvert, at unit price for concrete, plus unit price for reinforcement, plus unit price for form work.

Other combinations will naturally suggest themselves.

*Recommendations.* (1) Simple units should be used until the young engineer has proceeded sufficiently, so that composite units may be ascertained with a degree of certainty.

(2) Simple units should be used throughout the early stages of any work, in order to secure working cost-reference data.

447

Digitized by Google

^{*}The three unit prices mentioned are variables changing in each case of change of design, regardless of the fact that each unit price is of itself a composite unit.

### COST-ANALYSIS ENGINEERING

- (3) In general, simple units should be used in all detail reports.
- (4) Composite units may be used to facilitate the inventory and to reduce time, labor, and cost in work of extended character, where sufficient duplications occur to make the method worth while, and where specific instructions have been given.
- (5) In general, the conditions on any particular job should receive individual study before any decision as to the proper cost units is reached.

It should be added that a quantity unit at a unit price is not necessarily a unit of value. The quantity unit may be readily checked and established. The price unit may include many elements not representing true value or even true cost. A contract price or a quoted cost price should be analyzed with reference to the thing furnished, with due regard to the various processes through which the article has passed before delivery, to determine whether the stated cost, at the cost unit used, is a reasonable cost under the conditions surrounding the transfer of the construction unit. Many times quantity units must be purchased with 80-cent dollars. In some cases this is a natural condition, and represents value received; in many others this is not so.

#### ON THE SUBJECT OF

## DAMS AND WEIRS

#### PART I

1. What do you understand by reverse pressure? Does this pressure favor the stability or not?

2. Discuss the determination of crest width.

3. Of what does the security of dams against sliding depend?

4. What do you understand by theoretical profile?

5. Discuss briefly the two methods of determining stresses in a dam.

6. Make a complete design of a dam 65 feet high on rock foundation. Use both analytical and graphical methods.

7. Discuss Haessler's method of drawing lines of pressure.

8. What might be the effect of a mass of filling against the toe of a dam?

9. Discuss briefly the precautions necessary to take in a dam on pervious material.

10. Discuss briefly the correct design of crests for weirs.

Google Digitized by

ON THE SUBJECT OF

## DAMS AND WEIRS

#### PART II

1. Discuss the value of an impervious rear apron.

2. When a dam has a porous fore apron, what is done to assist the stability of the dam?

3. What is the essential difference between arch dams and plain gravity dams?

4. What is an "open" or "barrage" dam and what is the purpose?

5. Discuss the "criterion for safety" of a weir.

6. Discuss the principle of the differential arch.

7. Discuss the principles of design of a submerged weir on sand.

8. What is meant by the term "piping"?

9. Discuss American versus Indian treatment as regards location of draw gates.

10. What are the advantages of open dams as compared with solid weirs?

۲

452

#### ON THE SUBJECT OF

# IRRIGATION ENGINEERING

1. Define the term gravity works as applied to irrigation, and enumerate the sources of water supply.

2. Explain fully the effect of slope and of area of crosssection upon the location of a canal. What should determine the minimum and maximum velocity of flow?

3. Describe fully the nature of irrigation, and compare the design and control of an irrigation system with the design and control of a domestic-water supply system.

4. Describe fully the principles governing the design and location of masonry weirs and dams.

5. Describe the different types of current meters, and explain their use in determining mean velocity of flow.

6. Describe fully the principles governing the location of an impounding dam, and describe the method of conducting surveys to determine the capacity of the reservoir.

7. Explain the effect of evaporation upon storage-water supplies, and the allowance to be made therefor.

8. Define the term *duty of water* as applied to irrigation. Explain fully how and why the duty of water may determine the financial success or failure of an irrigation project.

9. Define the term *precipitation*, and explain the relation between available precipitation and the necessity for irrigation.

10. Explain the Chezy formula as modified by Kutter.

11. Define the term *lift irrigation*, and enumerate the sources of water supply.

12. Define the terms wetted perimeter, hydraulic radius, and coefficient of friction.

13. Define the term *weir dam*, and fully explain the principles governing its location and construction.

14. Describe the effect of evaporation upon run-off; and explain how evaporation is affected by topography, soil, humidity, and temperature.

15. Explain the effect of absorption and percolation upon storage supplies, and the allowance to be made therefor.

16. Explain how the variations in run-off will affect the design of the spillway of a reservoir.

17. Explain the method of measuring flow of streams by weirs, and state the Francis formula for the flow of water over weirs.

18. Describe fully the units of measure for water duty and flow.

19. Describe the effect of altitude upon precipitation.

20. Enumerate the parts forming the headworks of a canal, and describe fully the functions and construction of each part.

21. Explain fully the methods of measuring rainfall.

22. Describe the rating of the current meter.

23. Explain fully why the duty of water is rising in some portions of the West.

24. Explain how the topography of the country will affect the location of a canal.

25. Explain the necessity for drainage upon hillside location, and describe the various ways in which it may be accomplished.

26. Define the term *run-off*, and explain how it will be affected by topography, soil, and temperature.

27. Explain the principles governing the flow of water in open channels. Explain the relation between velocity of flow and crosssectional area of a channel.

28. Describe the field operations in determining the mean velocity of flow in a stream.

29. Define the term storage works; explain their functions, and fully explain the principles governing their capacity, location, and construction.

30. What depth of water upon the surface is necessary to water the average soil thoroughly, and how many waterings should be given in a season?

31. Enumerate the parts entering into a perennial canal system, and fully describe the functions of each part.

32. Explain the relation between run-off from a given area and the capacity of storage works.

# GENERAL INDEX

In this Index the Volume Number appears in Roman numerals—thus: I, II, III, IV, etc., and the Page Number in Arabic numerals—thus: 1, 2, 3, 4, etc. For example: Volume IV, Page 327, is written, IV, 327.

The page numbers of this volume will be found at the bottom of the pages; the numbers at the top refer only to the section.
